SHAH ALAM, 20 November 2025 – Times Higher Education (THE) Interdisciplinary Science Rankings 2026 has affirmed Universiti Teknologi MARA (UiTM)'s standing in the 201–250 band in its second edition, showcasing the institution's enduring efforts to foster innovation and excellence across interdisciplinary fields. Developed in collaboration with the Schmidt Science Fellows, the THE ISR recognises institutions that are driving impactful cross-disciplinary scientific progress.

THE ISR 2026 evaluates performance across interdisciplinary science fields, including core science disciplines such as computer science, engineering, life sciences, and physical sciences, as well as selected non-STEM disciplines like social sciences, education, psychology, law, economics, and clinical and health. This year's edition brings together 1,267 institutions from over 90 countries and territories, a 22% increase from the previous year, reflecting a global trend towards a more integrated and collaborative approach to science research.

The ISR framework is anchored by three core pillars: inputs, process, and outputs, which comprise a total of 11 metrics. Inputs examine institutional investment in interdisciplinary science, including funding and industry partnerships. Process evaluates support systems, such as facilities, administrative support, and a promotion policy that recognises interdisciplinary work. Outputs focus on the quality and impact of interdisciplinary publications, global reputation, and interdisciplinary citations.

UiTM's performance in the THE ISR 2026 underscores the university's strong culture of collaboration, both within its academic community and through strategic engagements with industry and global research networks. By integrating knowledge across a wide range of scientific disciplines, UiTM reinforces its role as one of Malaysia's leading institutions in education and high-impact research, contributing meaningfully to the global academic and scientific landscape.
