AUTHOR'S DECLARATION

I declare that the work in this dissertation was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This topic has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

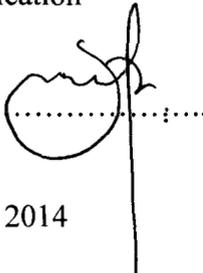

Name of Student : Norwati binti Khairul Anuar

Student I.D. No. : 2010780083

Programme : Master of Science (AS780)

Faculty : Applied Science

Thesis Tittle : Proton Conducting Polymer Electrolytes Based on Poly-Ethyl Methacrylate: Preparation, Characterization and Application

Signature of Student : .....

Date : June 2014

ABSTRACT

The objective of this study is to investigate the characteristics of PEMA based proton conducting polymer electrolytes as a free standing film and its performance in electrochemical cell application. A new material of proton conducting polymer electrolyte was introduced using PEMA, $\text{NH}_4\text{CF}_3\text{SO}_3$ and BMATFSI ionic liquid as the host polymer, doping salt and additive, respectively. In this study, all electrolyte films obtained by solution casting technique were transparent and sticky. Structural, morphological, thermal and electrical properties of all films were investigated by DSC, SEM, and IS respectively. Structural properties of the polymer electrolytes were further investigated by XRD. Interactions of the salt and ionic liquid with the host polymer were investigated by FTIR spectroscopy. Conductivity of the polymer electrolytes increased with salt content. This could be attributed to enhancement in number of carrier ions and enhancement of ion transport as a result of enhancement of amorphous region as shown by XRD study. The highest conductivity achieved is in the order of $10^{-4} \text{ S cm}^{-1}$ for the film added with 35 wt % BMATFSI. The film had high amorphicity and low glass transition temperature of 2°C which is the factor of improvement in segmental motion of the host polymer. The temperature dependence of the ionic conductivity of the polymer electrolyte system obeyed the VTF relation. The t_{ion} number in the polymer film is 0.82, showed that the conductivity in the film was predominantly due to ions. The film is electrochemically stable up to 1.8 V. The discharge performance of the batteries showed that the film has potential for application in protonic electrochemical cells.

ACKNOWLEDGEMENTS

I would like to take this opportunity to thank my research supervisors, Professor Dr Nor Sabirin and Professor Dr Ri Hanum with utmost sincerity and gratitude for their continuous guidance, support and encouragement throughout my masters study. I truly appreciate their inspiration in developing my independent thinking and research skills.

I also would like to express my gratitude to all of you with whom I have shared my research years. All of you have contributed to make this work possible, in one way or another. I would like to say a big thanks to all the people of the Centre for Foundation Studies in Science, University Malaya and Faculty of Applied Science, Universiti Teknologi MARA: Professors, students and technicians, for creating a scientifically stimulating and most importantly such a friendly atmosphere. Thanks especially to Hafizul, Pn Norazlin, Ms Fiza, Ms Siti Rudhziah, Ms Siti Fairus and Ms Akmaliah. I am also grateful to En. Saiful, our lab assistant of Faculty of Applied Science, University Teknologi MARA for his valuable help during the measurement session. It is a pleasure to work with all of you.

I would like to thank my mother, grandmother, brothers and sisters for their endless support and patience. Finally my most special thanks to my handsome husband Syed Bahari Ramadhan for his love, constant encouragement and for continuously reminding me of the essential things in life.
