INTRODUCTION

The very first Virtual Symposium on Teaching and Learning 2020 has been organised by the Academy of Language Studies, UiTM Cawangan Johor Kampus Pasir Gudang in collaboration with Unit Penulisan dan Penerbitan, BPJIA UiTM Cawangan Johor Kampus Pasir Gudang.

This symposium has provided an opportunity for researchers and educators to share their ideas and insights in the name of education. This symposium has also provided a platform for the exchange of knowledge and expertise in relevant fields and promoted exploration of potential collaboration for future research.

This event has the goal to bring academicians and researchers in education together from across the globe.

Researchers and authors have been invited to submit original high-quality extended abstracts. Papers are solicited on, but not limited to:

- a. E-Learning
- b. Innovation and Creativity in Teaching and Learning
- c. Assessment and Evaluation in Teaching and Learning
- d. Best Practices in Teaching and Learning
- e. Others (related to Teaching and Learning)

All accepted extended abstracts have been presented by participants on the symposium day via Google Meet.

All accepted, registered and presented extended abstracts have been published in this e-proceeding with e-ISBN. Authors of selected extended abstracts will be invited after the symposium to submit a full paper for Scopus-indexed Journals/ a special issue in the Insight Journal UiTM Cawangan Johor. Best Papers and Best Presentations have also been awarded in this event.

FOREWORD BY ASSISTANT RECTOR

Dr. Haryana binti Mohd Hairi

Assistant Rector, UiTM Pasir Gudang

Assalamualaikum wbt and good day everyone.

I am pleased to welcome all of you to the Virtual Symposium on Teaching and Learning, VSTL, 2020. Congratulations for your participation, fruitful sharing session and discussion for the symposium.

Today, we have witnessed educators across institutions, disciplines and expertise, coming together to share the insights, experience, and practices in teaching and learning. I bet that everyone has had your fair share of not only getting inputs and ideas from others, but also share your own perspectives in the field of teaching and learning.

Ladies and gentlemen,

VSTL 2020 is one of the many virtual academic get-togethers, which could have been organized in the conventional way, with face-to-face meetings and sessions. However, considering the many aspects in our current situation, with the seemingly unending COVID-19 fiasco, this symposium is successfully done on a virtual platform today without neglecting the ultimate purpose of such programs. I believe that all of us today have gained so many positive inputs for various aspects in teaching and learning even without physically meeting each other, which is no less than if the program is done conventionally.

It is high time that such an event took place to highlight the remarkable contribution, in which “the new norm” of teaching and learning took place in our current education situation. I am proud to know that, through a glance at the list of presentations planned for today, reveals the amazing diversity of these areas. Congratulations to all of you.

COVID-19 pandemic has not only changed our way of teaching and learning, but also forced us to become more creative and innovative. In some cases, we could not meet our students face to face, and had to use virtual methods, as how we met today to carry out our duty as teachers and educators. This can be easy for some of us, but a mounting task for others. However, the responsibility of educating our learners still needs to be carried out, in one way or the other, no matter how challenging it is. Thus, the purpose of this symposium is for us to

not only share the traditional practices but also new methods and techniques in online or distance learning.

I hope that VSTL 2020 has been a good platform to inspire us, the educators to try out new teaching techniques and the experts to share their insight and valuable knowledge in this area. This could also be the route to a unique opportunity to share and exchange with counterparts from different specialties the advancements in your field. I also hope that our meeting will not stop today and can promote exploration of potential collaboration for future research.

Ladies and gentlemen,

On behalf of the committees and UiTM Cawangan Johor, I would like to thank all of you for your support and I hope that you have had fruitful and rewarding exchanges from this program. I would like to also congratulate the Academy of Language Studies, UiTM Cawangan Johor, Kampus Pasir Gudang for organizing the symposium, together with Unit Penulisan dan Penerbitan of BPJIA, UiTM Cawangan Johor Kampus Pasir Gudang. It is my hope to see more programs such as this in the future.

Before I end my speech, I would like to share a quote by Phil Collins;

“In learning you will teach, and in teaching you will learn”. May all of us here never stop learning, and continue inspiring the learners, and each other in our jihad to share and value the knowledge that we have.

I hereby officiate the closing ceremony and announcement of awards of Virtual Symposium on Teaching and Learning 2020.

All the best to everyone, and may all our effort be blessed. Thank you.

Application of Internet-Based Tools in Integrated English Language Skills Classes for Open/Online Distance Learning (ODL)

Abstract

The application of various approaches is an integral part of a teaching and learning session. Numerous tools and techniques are readily available to be integrated into the sessions to ensure that the outcomes desired can be successfully achieved. However, thorough consideration and preparation must be done when it comes to choosing and integrating suitable tools. Some of the aspects considered are the learning outcomes, the types and function of the tools, and the usability of the chosen tools, which includes the materials and interaction tools. This paper presents the application of internet-based tools in integrated English language skills classes for open/online distance learning (ODL) which includes the pre, while, and post stages of the teaching and learning session.

Keywords: Online learning, open distance learning, English, integrated language skills, e-learning

Introduction

The development of education, in-line with the progress of time has required various shifts in the landscape of teaching and learning. Students in learning institutions are steadily changing in terms of age background and generation hence the different approaches which need to be practiced to suit their needs and learning preferences. This requires the instructors to further delve into the variety of teaching approaches and use multiple platforms in ensuring the quality of the teaching and learning activities, where the objective is achieved and the process itself is meaningful and enjoyable.

Among others, Education 4.0 which is a response to the needs of Industrial Revolution 4.0 (IR4.0) where humans and technology are aligned to enable new possibilities, highlights the flexibility of learning, where it can be done anytime and anywhere (Fisk, 2017). E-learning tools is a major part of flexible learning as it offers great opportunities for such activities (Anealka A.H., 2018). As far as internet-based tools are concerned, some of the aspects worth-noting when it comes to the preparation of lessons are digital literacy of the learners, the types, function, and usability of the chosen tools.

In general, the tertiary students at present belong to Generation Z (Gen-Z) with the age range from 18 to 23 years old. This generation is revolutionized by technology, and well-engaged in flexible learning with minimal boundaries, which includes both the usage of related software or applications, as well as the devices in the process (Kozinski, 2017). They can use multiple platforms and technologies at the same time and quickly pick up new software. Information technology (IT) is a major part of their life, with no exception to learning. Therefore, the integration of internet-based tools either web or mobile apps-based is seen to fit the need in teaching and learning.

The tools readily available on the web or smartphone applications store can be categorized into different types and functions. As for the types, it can be generally divided into:

1. *Web-based* - accessed via Internet browsers
2. *Mobile apps-based* - accessed via applications for smartphone/tablet PC
3. *Combination of both web and mobile apps-based*

In general, the tool which offers handheld device applications can also be accessed via its web-based application (e.g.: Google Classroom, Kahoot, Mentimeter), but not all web-based tools offer handheld device application (UFuture, iClass).

As for the function, the most comprehensive one is the *learning management system* (Google Classroom, OpenLearning, UFuture, iClass) which integrates all integral functions related to teaching and learning such as material sharing platform, discussion board, assignment or assessment management where the learners submit their works to be checked and marked by the instructors. The assessment management functions in general also integrate the auto-marking feature which allows the instructor to automatically generate the marks of the learners once the assessment is completed.

Other individualized functions range from *communication* (WhatsApp, Telegram), *social media* (Facebook, Instagram), *media storage* (Google Drive, Dropbox), *media sharing* (Padlet, Flipgrid), *online quiz* (Kahoot!, Quizizz), *survey* (Mentimeter, Google Form), *screen recording*, (ScreenRec, Screencastify), *video conferencing* (Google Meet, Zoom), and *multimedia editing and designing* (Canva, Powtoon, Prezi). The combination of these functions can assist both instructors and learners in elevating their teaching and learning experiences.

Usability is the other factor that also needs to be considered as teaching and learning are concerned. On one hand, good usability for online learning materials means that the site, content, and media are easy to find, use, and navigate. On the other, usability for the people means the interaction tools (such as email and discussion forums) are easy to use and facilitate getting input or help as needed (Shank, 2009).

Consideration in terms of the learning outcomes of the lesson, and the applications used (types and functions), usability (for the materials and the people), and other contributing factors such as internet bandwidth required and the users' (instructors and learners) level of digital literacy are important to ensure the successful process of teaching and learning.

Objective

The objective of this paper is to present the application of internet-based tools in an integrated English language skills class for open/online distance learning (ODL).

Internet-based tools application in integrated English language skills class for ODL

Background

The subject for this particular paper is ELC151 (Integrated Language Skills II), which is a compulsory English language subject for undergraduate students (diploma level) for numerous programs in the institution. As it is an integrated language skills course, the learning outcomes focus on the main language skills, namely reading, speaking, and listening; whereas grammar is taught incidentally in the teaching of the stated skills.

Learning outcomes

The general learning outcome for this particular lesson is to demonstrate the ability to listen and respond to various discourse at a higher intermediate level. The specific learning outcome is listening to details.

Pre-listening stage

The lesson started with a set induction for the learners to familiarise themselves with the activities and theme of the lesson. They were given a brief explanation about the lesson, including the kind of activities and the expected outcomes. The initial question given to the learners via WhatsApp group using voice notes was "*Who do you think is the strongest/the best superhero in The Avengers?*", and they were instructed to respond also by using voice notes. All of them participated in the activity, and they were sharing their personal opinion, agreeing as well as disagreeing with others regarding the issue.

While-listening stage

There were two parts to this stage, which involved similar activities. In the first part, the learners were instructed to watch and listen to a video on Facebook entitled *Kids' Choice Awards - The Avengers*. For the second part, the video was on YouTube, entitled *Avengers Infinity Wars singing The Marvel Bunch*. After a few minutes given for them to watch and listen to the videos, they were instructed to complete a live online quiz on Quizizz, in which the link is given to them via Google Classroom. The types of questions were multiple-choice questions and fill in the blanks, which replicate the same type of questions for their assessment.

Post-listening stage

After completing the activities in the second stage, the learners were instructed to engage in a sharing session on the WhatsApp group about the challenges in the listening activity, their strategies in answering the questions, and suggestions for them to improve their listening skills. They were given options to use voice notes or text messages for this activity.

Assessment

The assessment was done using Google Forms with auto marking function in the Google Classroom platform. The types of questions were fill in the blanks, which is the same as one of the question types for the activities done during the lesson.

Discussion

All in all, the application of internet-based tools presented in this paper combines the usage of various applications, which involve the consideration of the learning outcomes of the lesson, the various types, and functions of the tools, as well as the aspect of usability. The applications used are of different types and functions, which were integrated into the complete lesson to achieve the desired learning outcome, listening to details. The applications used such as Facebook, YouTube, WhatsApp, and Google Classroom are among the top apps and widely used which lead to the familiarity of their usage among the learners, who belong to the generation coined as true digital natives, in which flitting between platforms is not an issue. The combination and usage of applications are dynamic as the learning outcomes and learners need to be considered.

The best part of integrating ODL with the various internet-based tools and applications is it does not only benefit the learners, but the instructors as well by making the teaching and learning process easier. The idea of having more choices in integrating different types of applications in various learning stages helps the instructors to grab the students' interest. The instructors can always choose the most suitable applications that suit students' needs and at the same time focus on achieving the lessons' objective. Teaching listening, for example, requires a lot of activities involving listening. The ability to listen to the various authentic materials helps deliver the lesson. Incorporating various platforms such as Facebook and YouTube, opens the door for the learners and instructors to obtain a lot of authentic materials, be it from the native or nonnative speakers of English. On the other hand, WhatsApp and Google Classroom serve as mediums of communication that are easily available and free to be used by both the instructors and students. In terms of assessments, Quizizz and Google Form provide a different experience of completing a quiz or a test for the students while at the same time help instructors to reduce their marking load through the usage of auto-marking feature.

The learners also have the opportunity to study at their own pace anytime and anywhere. The idea of using platforms that students are familiar with definitely has made the activity more interesting and engaging to them. The learners seem to be more comfortable using the platforms such as Facebook, YouTube, and WhatsApp as they are using them for other personal purposes almost every day.

Whichever way internet-based tools are utilized, if its usage can assist the success of the teaching and learning process and achieve the desired objectives, there should be no boundaries for creativity among the instructors to make full use of it.
