INTERNATIONAL WEBINAR PROGRAMME (HYBRID MODE) ON SUSTAINABLE CIRCULAR AQUACULTURE IN SOUTHEAST ASIA: TOWARDS AFFORDABLE FISH AND FOOD SECURITY

Authors: Bebe Norlita Mohamed and Sharifah Raina Manaf

An international webinar programme (hybrid mode) on Sustainable Circular Aquaculture in Southeast Asia: Towards Affordable Fish and Food Security was successfully organised by the Centre for Studies in Science, Plantation and Agrotechnology, Universiti Teknologi MARA (UiTM) Sarawak Branch, Mukah Campus, in collaboration with PT Ikanesia Nusantara Akuamarin, Indonesia, on 8th December 2025. The organisation of this webinar is part of a collaborative activity with an international industry, which is in line with the UiTM Sarawak Branch's efforts to strengthen global industry networks. This webinar is organised as part of the university's strategic initiative to achieve PI-074: Number of Activities under MoA/MoU with International Industries by strengthening engagement and collaboration with global industry partners. The webinar was designed as a platform to explore the potential of aquaculture in the Nusantara region and to share knowledge and best practices in the sustainable management of aquatic resources.

The organisation of this international webinar aimed to enhance participants' knowledge and understanding of the aquaculture industry in Indonesia, while opening opportunities to explore collaborative ventures between UiTM and industry partners in the field of aquaculture, both locally and internationally.

In addition, the programme was expected to encourage the sharing of knowledge and best practices in the sustainable management of aquatic resources to support the development of a sustainable fisheries industry. The webinar also served as an interaction platform between UiTM students and lecturers and industry experts from Indonesia, thereby providing international exposure and strengthening academic and professional networks.

The two-hour programme moderated by Dr. Sharifah Raina Manaf comprised a sharing session by Mr. Farhan Yusron, PT Ikanesia Nusantara Akuamarin, Indonesia. The presentation covered innovations in aquaculture, challenges and opportunities in the fisheries industry, and effective marine resource management, prompting an enthusiastic response from participants who engaged with numerous questions on these topics. Overall, the webinar has effectively provided participants, mostly students from the Diploma in Aquaculture Technology with valuable exposure to sustainable aquaculture practices, fostering engagement, discussion, and enhanced understanding to support their academic and professional growth.
