Acknowledgement

The time I spent in Malaysian agricultural research and development institute (MARDI) as a trainee from December 2015 to March 2016 was a memorable one for me as it was rich in experience sharing and theory application.

My training period would not have been possible without the contribution and collaboration of others. My sincere gratitude:

- To almighty god who granted me health and long life, without which I could not have finished this industrial training.
- Mr. Gregory Anak Lipong, who is the station manager of MARDI Saratok and my supervisor. I want to thank him for giving me the opportunity to follow my industrial training at his place. He had the kindness to accept me in MARDI and guide me through my practical session with advice and feedback despite his busy schedule.
- Then, I would like to thank the person in charge for this industrial training for his valuable guidance and advice. He had always time to answer my entire question concerning my training issues.
- To the rest of MARDI staff includes of the research officer for their hospitality and guidance which helped me to complete my task during past 14 weeks in MARDI.
- I am also thankful to and fortunate enough to get constant encouragement, support and guidance from my parents and family who helped me to successfully complete my training period.
- Last but not least, special thanks to my training partner for sharing their knowledge, time and commitment from our first day and end of this training period.

List of Tables	
Chapter 1 : Introduction to Industrial Training	1
1.1 Introduction	
1.2 Purposes of Industrial Training	
1.3 Report Objectives	
1.4 Advantages of Industrial Training	
Chapter 2 : Organizational Background	6
2.1 Introduction	
2.2 Organizational Structure of Headquarter	
2.3 Organizational Structure of MARDI Saratok	
2.4 Vision and Mission	
Chapter 3 : Weekly Summaries	13
Chapter 4 : Leafy Vegetables	16
4.1 Introduction	
4.2 Cultivation Technique	
4.3 Importance of Hydroponic System	
4.4 The Producers	
4.5 Harvesting	
Chapter 5 : Tomato	21
5.1 Introduction	
5.2 Scientific Classification	
5.3 The Varieties	
5.4 Cultivation Technique	
5.5 Types of Fertigation	
5.6 Pest and Disease	
Chapter 6 : Pumpkin	27
6.1 Introduction	
6.2 Pruning Technique	

Chapter 1 INTRODUCTION TO INDUSTRIAL TRAINING

1.1 Introduction

Industrial training is compulsory for every student on higher education institutions. Every student must be involved in industrial training for requested period in order to get pass with diploma certificate.

The industrial training usually carried out at either government or non-government agency within country. It is takes one whole semester. This is important because industrial training will train the trainees to face real working condition. Thus, it would produce new graduates with high capability either in academic or non-academic.

Besides, industrial training is about an exposure. This enables student to learn on the real situation in some profession. As student comes out from their comfort zone, they will definitely develop their social skills inside.

1.2 The purposes of industrial training

- **To expose the students to actual working environment.**

Students will be able to expand their knowledge and experiences through all the activities that they participated. During industrial training period, students also can learn about how real working life is. Thus, it would enable them to do any task easier and efficiently in the future. Students also being exposed with new information which are not included in theory in class lesson.

- **To develop job experiences among students.**

Students will be able to gather any experience that can be useful in the future. Activities during the training period can be guidance for students to face a real life profession. Furthermore, they can apply their past experiences to solve the problems in the future. This industrial training would produce fast thinker graduates that have a capability to give a quick solution in order to solve any upcoming problem.

- **To promote better understanding and knowledge in specific field.**

Students will be able to strengthen their understanding and beliefs during training. This is because theories that have been learned in class can be applied on the real situation. Not all the theories provide real understanding but when it comes into field it can be understood. By showing demonstration, it will become knowledge for that individual. Also not all information is provided in books or class but extra information can be gained through practical session.

- **To develop social and communication skills among graduates.**

During industrial training, students can develop their social and communication skills with another. All the tasks given will require them to cooperate with other staff or officers. In this training, students will be able to associate with others so this is the right moment for them to develop their social skills. Team work spirit also can be gained. As the result, at the end of training period they will become a person who can adapt with different environment together with new people and culture.
