ACKNOWLEDGEMENT

First of all, I want to thanks to Allah S.W.T for His fantastic wisdom and inspiration given to us to write a report about our practical training at Felda Sahabat 39 Estate from 30th November 2015 until 06th March 2016. The main purpose of writing this report is to provide us more information about the activity in this plantation. This report is all about the activities in this oil palm plantation which is from the maintenance stage until the collection of FFB. Besides that, by write this report we also can get know a little bit about the activities in the oil palm plantation such as on how to harvest the FFB and maintenance stage.

I want to say a lot of thanks to the manager of Felda Sahabat 39; Mr Mohd Sahailin bin Barahim whom calm hearted that gave us permission to do our practical session here until the end. Thank you for giving such useful motivation, support and motivation to us.

Secondly, big appreciation of thank goes to the assistant manager whom guide us along our practical session. His guide and advice were very useful to us from the beginning of our practical until we finished it. As we doing our practical, he teach us the ways to discipline ourselves during working and told us that was the most important behavior that good employee must have.

Thirdly, thanks to all the staff that contributes directly or indirectly during our practical especially to the foreman of Felda Sahabat 39. They had shared their experience that very useful to us as if we going to work in this industry. The teamwork that they shared with us was really as an honor because we were practical there. A lot of thank to all of them.

Next, I also want to show my sincere thanks to all of my family members, friends and to everyone that had supported us along our practical. Thanks to our lecturer, En Muhammad Syukrie bin Abu Talip for given us a guided and also teach us on how to write this report properly because it is very important things for us to complete this report within the required time frame. Lastly, I would like to thank to my partner for contribute in the writing of this practical report and I hope that this report would be a very useful report for us as student of Diploma in Planting Industry Management in the future, especially about the activities carried out in the oil palm plantation.

INTRODUCTION

As to fulfill the requirement of Diploma in Planting Industry Management subject for the last semester students, we were doing our practical as the last subject which needs to be completed in three months. Student will be stationed in particular organization to reveal them to real work atmosphere. All matters or problems which arose during training should be discussed with employer. Student that is conducting practical training are prohibited to spread employer secret to other parties by any means. Often student will face various challenges and problem that never go through by the students. This subject credit hour required six hour and will be presented for evaluation.

The practical training is very important for every student to make them have their own experiences in doing the work in the field of what there applied for the practical session. This is good for student to have their own experience and get knowledge as much as their can. In the class, student only learn it in theory without doing it practically. By having the chance doing the practical training, student may do it practically and had expose on the aspect in a wide range of areas like management and so on. Their understanding about the theory also may change after they practically experience it.

Other than that, practical training may also help to improve the work skills in the field. Where, it will enable the student to settle down various kinds of situation that occurred in the daily work. Confident is one of the most important things as it can lead to the success. Other important skill while doing practical training is communication skills with people around including manager, staff and workers. Communication is important in order to deliver any task that being given by manager. It also gave us the confident to ask, answer and share anything if having a good communication skill.

All of theories that had been studied in the class were really useful in the field of practical training. As in the practical session, students need to get all the experience and learn anything they should in order to improve their knowledge about plantation management.

OBJECTIVE OF TRAINING

The objective of this practical training:

1. To gain new experience on how plantation management was carried out properly.
2. To expose students about the real working condition in oil palm plantation.
3. Help students to learn about the oil palm maintenance, harvesting activity, fertilizing program and so on.
4. To encourage students become more interested about the oil palm industry.
5. Enlarge knowledge and student skills.
6. Instilling trustworthy attribute, responsible and confident-self.
7. Enable student to practice the theory that had been learn during lecture while undergoing their industrial training.
8. To evaluate current student ability while undergoing industrial training as a preparation to venture job nature that is real after graduated.

This practical training is very important for us as students of Planting Industry Management because it can give us a new experience about how plantation management was carried out rather than just learning the theory in the classes.
