ACKNOWLEDGEMENT

Thanks to Allah S.W.T, finally we already finished our project proposal as to fulfill the syllabus of EEE358 (final year project 1). We are grateful because we have Madam Nik Nur Shaadah Binti Nik Dzulkefli as our supervisor that we can refer and always lend her hand to help our group member especially each of us to settle any problems that we face. Moreover, our supervisor also helps us in giving some ideas about our design project, solve the difficult equation and teach our group how to finish this proposal.

In addition, we want to thanks to our families and friends because be a part of our project and give a lot of support until this proposal was finished. Their encouragement is very important to us to proceed with this project and InsyaAllah this project will be a good project.

ABSTRACT

Car vibrate pillow designed for drivers feels more comfortable when a person start driving. This product can be used in all types of car and the shape of this product comes in many types. It typically consist of a massage that designed to give drivers more comfortable when start driving. It is also designed to decrease the pain of neck, back and waist part of drivers. It vibrates and stimulates the acupuncture point continuously, increases the blood circulation of the pain part. Meanwhile to relax the muscle, removing fatigue and recovering energy. Decreasing accident during driving such as prevent drivers from sleepy and make driving comfortable and easy.

Car vibrate pillow also consists of timer that has been set for the pillow start vibrate and stop. Besides that, the drivers can adjust the speed of motor to make the pillow to vibrate and it will make drivers feel comfortable especially drives at midnight and it will prevent drivers not sleepy to drive. Nowadays, this product is new and this product can be used anytime especially when we are driving.
