ACKNOWLEDGEMENT

Alhamdulillah, thanks to Allah with His blessing we are able to complete this final year project at last. We had gone through many obstacles and frustration as well as joy along we doing this project. With Allah always by our side, we are to finish this project.A very special thanks to our supervisor, madam Siti Aisyah that guide us a lot in order to make this project came to true. madam Siti Aisyah always gives her commitment and full of support to us.

Last but not least, we would like to dedicate our thanks to our beloved parent and all of our family that also contribute to the success of this project. They had given us moral support to help us to accomplish this project. We also would like to say a thank you to our group members that had give full of commitment and dedication to this project.

ABSTRACT

The 'Automatic drying machine' is a project that helps people drying their clothes on short time. We use humidity sensors which is HGM -20G to sense the presence of the humidity at the clothes. When its detect humidity, the whole circuit will function and started to make the drying clothes dry. This humidity sensor will detect the humidity first on the clothes,If the clothes is beyond 76 percent, the bulb which is one of the elements that make the clothes dry is on. So, by having this machine, the owner will make the clothes dry faster and also dry at the indoor place. So the owner is no need to dry their clothes at the outside home and alert if the rainy day comes
