Introduction

In order to complete my studies in Diploma in Planting Industry at University of Technology Mara Sarawak (UiTM), it was compulsory to undergo the course practical and industrial training, which require us to explore and experience the real working environment at the estate. I have decided to choose Jaya Tiasa Holding as my practical training place as this authority has become one of the well-known authorities in estate in Sarawak.

Objectives of the Industrial Training Program

It is compulsory for university student to pass the industrial training before being awarded the Diploma in Planting Industry certificate. Student will be attached to the Government Department, Organisations or Companies for a specific period of time, to be exposed to the actual working environment whereby student will encounter many new problems and challenges. There are several specific industrial training programme objectives:

i. To expose student to actual working environment.
ii. To enhance the student knowledges and skills.
iii. To instil the qualities, responsibilities and self-confidence.
iv. To expose student to safety practices and regulations in an industry.
v. To instil the spirit of teamwork and good relationship between students and fellow workers.
vi. To assess the student ability and competency in their preparations to join the workforce upon completion of their studies at university.

Jaya Tiasa Holdings Berhad is the leading fully integrated timber producer in Malaysia with access to 1.76 million acres of timber concessions in the state of Sarawak, Malaysia. Jaya Tiasa is derived from 2 Bahasa Malaysia words Jaya Sentiasa which means 'Success always'.

Then, Daro Jaya Tiasa Plantation is one of the oil palm company in state of Sarawak. There are 4 phases in this plantation company and I have practical at phase 4 which consist of 3 phase, phase 4A, phase 4B and phase 4C. The total area for phase 4 is 2335.46 Ha and there is a division between all of the 3 phases. For phase 4A, the area is consists of 830.61 Ha altogether while for phase 4B and 4C, the area are consist of 916.48 Ha and 613.43 Ha respectively.

Daro Jaya Tiasa Plantation phase 4 have been started on the October 2009 and the last year of planting is January 2012. There are 8 types of materials that have been planted in phase 4 which are Guthrie, United Plantation (UP), Sawit Kinabalu, Felda, Applied Agriculture Resources (AAR), Sime Darby, Golden Hope (G.Hope) and HRU. The standard per hectare (SPH) of planting oil palm is 152 palms per hectare where the distance between palms is 8.7m x 8.7m.

CORPORATE INFORMATION

VISION

To be Malaysia's leading producer of renewable and sustainable quality oil palm and wood based products.

MISSION

To create a strong, viable corporate entity, a first choice employer, continuously improving by harnessing our resources of people, processes and technology, contributing to the nation's development.

JAYA TIASA
