Concept of jabatan pertanian sebiew

Vision

- Spearheading commercialization of agriculture and transformation of agriculture community to achieve high income.

Mission

- We commercialise and modernise agriculture to improve income of the agriculture community.

Introduction of fishery

The importance of fisheries in a country cannot only be measured by the contribution to the GDP, but one must also take into consideration that fisheries resources and products are fundamental components of human feeding and employment. Another aspect that makes fisheries resources important is the self renewable character. Unlike mineral resources, if the fishery resources or any other biological resources are well managed, their duration is pratically unlimited. An important conclusion is that the fundamental basis for the conservation and management of fisheries resources stems from the biological characteristics. (This does not mean that social, economic or any other effects are not important for management).

Aim and Objective

- To admit students to institute and increase knowledge among students.
- To promote effective fisheries management and improving standards of fisheries management.
- To provide the technical and general knowledge necessary for competent fisheries management.
- To promote the interests of members.
- To co-operate with other institutions and associations in order to achieve common goals.
