SILVERPARK: Enhancing State-Wide Parking Infrastructure through a Location-Aware UI/UX Framework (The Manjung Maritime Approach)

SilverPark is a smart UI/UX redesign of Perak's public parking app, transforming a flawed utility into an accessible civic service. Built to fix the current Park@Perak app's 1.9-star rating caused by confusing payment steps, poor text readability, and a total lack of user feedback, SilverPark introduces a highly visible, location-aware framework.

Using the Manjung district as a pilot phase, the app automatically switches to a maritime theme and introduces a friendly AI Assistant Bot. This bot helps drivers easily find local food, beaches, and hidden gems. Optimized with a strict layout grid and high-contrast text, SilverPark reduces user anxiety, bridges the digital gap for seniors, and promotes local tourism.
