ABSTRACT

Foresight is a systematic, participative process which aims to acquire intelligence on the future based on medium term and long term visions which will assist the present-day decision making process in a collaborative effort. It can also assist the policy making process which in turn shapes the science, technology and innovation on various organizational levels. Since its rapid emergence in the 90s, Malaysia has also involved in such practices. However, little is known about Malaysia's foresight initiative. The foresight initiative conducted by Malaysia since its involvement in 1997 until Malaysia's first technology foresight initiative at the national level does not clearly show Malaysia's position of its foresight initiative. The details of it and the way it is utilized are unknown at this point. This research aims to address this by providing a case study of foresight in Malaysia.

ACKNOWLEDGEMENT

Bismillah. All praise to Allah swt for the completion of this research. I would also like to hand my highest gratitude to my parents, for their love and support throughout my journey in this MSc in IT programme. I would like to take this opportunity as well to sincerely thank you to my research supervisor, Prof. Dr. Nor Laila Md Noor, for her guidance, support and especially for her patience in guiding me throughout the research. A very special thanks to Mr Rushdi Abdul Rahim, the Director of Malaysian Foresight Institute, for giving me very valuable inputs to this research. To all my lecturers, I am very grateful of your involvement in my education throughout the masters programme. I would also like to thank my colleagues for their support and encouragement. Lastly, to everyone who has contributed to this research efforts, be it directly or indirectly, thank you. Assalamua'laikum warahmatullahi wabarakatuh.
