**EVALUATION OF EFFECTIVE
MICROBES FOR CONTROL BACTERIAL
LEAF BLIGHT (BLB) DISEASE ON
PADDY**

NURATIQA H BINTI OTHMAN

Final year project report submitted in partial fulfillment of the
requirements for the degree of
**Bachelor of Science (Hons.) Plantation Technology and
Management**

Faculty of Plantation and Agrotechnology

January 2015

CANDIDATE'S DECLARATION

I declare that the work in this Final Year Project was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the result of my own work, unless otherwise indicated or acknowledged as referenced work. The final year project report has not been submitted to any academic institution or non academic institution for any other degree or qualification.

In the event that my Final Year Project is found to violate the conditions mention above, I voluntarily waive the right of conferment of my bachelor degree and agree to be subjected to the disciplinary rules and regulations of Universiti Teknologi MARA.

Name of Candidate : **NURATIQA H BINTI OTHMAN**

Candidate's ID No. : 2012235816

Programme : Bachelor of Science (Hons.) Plantation
Technology and Management

Faculty : Plantation and Agrotechnology

Title : Evaluation of Effective Microbes to
Control Bacterial Leaf Blight (BLB)
Disease on Paddy.

Signature of Candidate : _____

Date : 30th January 2015

ABSTRACT

Bacterial leaf blight diseases have become major nuisance of paddy production nowadays. Bacterial Leaf Blight is, the more destructive manifestation of the disease, wherein the leaves of the entire the plant turns pale yellow and white during the seedling to the early tillering stage, resulting in a partial or total crop failure . In the late years, the scientist has diverted their attention towards the potential of good and beneficial microbes (Ritika Bhattacharjee., 2014). Thus, this study is conducted to evaluate the effectiveness of microbe's formulation to control Bacterial Leaf Blight. The parameters of this study are *Xanthomonas oryzae* (pathogen of Bacterial Leaf Blight) and Effective microbe's formulation (Streptomyces bacteria). The methodology used in this research is by determining the diseased paddy that affected by Bacterial Leaf Blight disease and rate of microbes (Streptomyces bacteria). The experiment will be first tested in the. In the laboratory, the infected paddy leaves will be isolated and inoculate under the nutrient agar (NA) medium. After that, the experiment will be further conducted in the greenhouse at where the healthy paddy plants will be grown. The pathogen will spread into the healthy plants and after the certain period of time, the application of treatment will be applied. The expected outcome of this experiment is the effectiveness application of effective microbes can be recommended for wider use in paddy fields and also will be useful for further research of wider scale in paddy fields industry.

TABLE OF CONTENTS

	<u>Page</u>
ABSTRCT	iv
ABSTRAK	v
ACKNOWLEDGEMENT	vi
TABLE OF CONTENTS	vii
LIST OF TABLES	xi
LIST OF FIGURES	xii
CHAPTER 1 INTRODUCTION	
1.1 Background of Study	1
1.2 Problem Statement	3
1.3 Significance of Study	3
1.4 Objectives of the Study	4
1.5 Hypothesis	4
CHAPTER 2 LITERATURE REVIEW	
2.1 Bacterial Leaf Blight Disease	5
2.2 Potential Application of Effective Microbes as a Biological Control	6
2.3 Changing Pattern of Controlling Bacterial Leaf Blight Disease	7
2.4 Impacts of bacterial Leaf Blight Disease on Economic Loss	8
CHAPTER 3 METHODOLOGY	
3.1 Materials and Equipment	9
3.2 Site Description	9
3.3 Experimental Procedures (In Vitro Laboratory)	
3.3.1 Isolation and Streaking Procedure of Pathogen (<i>Xanthomonas oryzae</i>)	10
3.3.2 Gram Straining Process	11
3.3.3 Nutrient Broth Media Preparation and Bacteria Growth	13
3.4 General Description of the Experimental Site (Rainshelter)	
3.4.1 Plot Layout and Preparation	14
3.4.2 Pots Design Preparation and Soil Preparation	15
3.4.3 Seed Preparation	16
3.4.4 Seed Sowing	16
3.5 Schedule of Manuring	17
3.6 Inoculation Process and Treatment Application	18
3.7 Data Collection	
3.7.1 Disease Severity (Bacterial Leaf Blight)	19
3.7.2 Plant Height	20
3.7.3 Number of Leaves	21
3.7.4 Number of Tillers	21
3.8 Experimental Design	21
3.9 Statistical Analysis	21
3.10 Schedule of Work	22
CHAPTER 4 RESULTS AND DISCUSSION	
4.1 Effect of Different Application on Disease Severity	23
4.2 Effect of Different Treatment Application on the Plant Height	27

4.3	Effect of Different Treatment Application on the Number of Leaves	30
4.4	Effect of Different Treatment Application on the Number of Tillers	33
4.5	Discussion	36
CHAPTER 5 CONCLUSION AND RECOMMENDATION		37
