Thesis submitted in fulfilment
of the requirement for the degree of
Doctor of Philosophy

Faculty of Mechanical Engineering

May 2016

CONFIRMATION BY PANEL OF EXAMINERS

I certify that a panel of examiners has met on 29th December 2015 to conduct the final examination of Nor Fazli Bin Adull Manan on his Doctor of Philosophy thesis entitled “Assessing Multiple Approaches and Various Hyperelastic Models For Biomechanical Properties of Animal Skin” in accordance with Universiti Teknologi MARA Act 1976 (Akta 173). The Panel of Examiners recommends that the student be awarded the relevant degree. The panel of Examiners was as follows:

Solehuddin Shuib, PhD
Associate Professor
Faculty of Mechanical Engineering
Universiti Teknologi MARA
(Chairman)

Juri Saedon, PhD
Senior Lecturer
Faculty of Mechanical Engineering
Universiti Teknologi MARA
(Internal Examiner)

Dato’ Ahmad Mujahid Ahmad Zaidi, PhD
Professor
Faculty of Engineering
Universiti Pertahanan Nasional Malaysia
(External Examiner)

Sandro Mihradi, PhD
Assistant Professor
Fakultas Teknik Mesin dan Dirgantara
Institut Teknologi Bandung
(External Examiner)

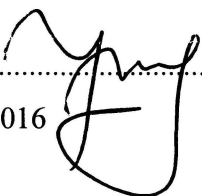

DR MOHAMMAD NAWAWI
DATO’ HAJI SEROJI, PhD
Dean
Institute of Graduate Studies
Universiti Teknologi MARA
Date : 9th May, 2016

AUTHOR'S DECLARATION

I declare that the work in this thesis was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research

Name of Student : Nor Fazli Bin Adull Manan
Student I.D. No. : 2011258326
Programme : Doctor of Philosophy (Mechanical Engineering) – EM990
Faculty : Mechanical Engineering
Thesis Title : Assessing Multiple Approaches and Various Hyperelastic Models for Biomechanical Properties of Animal Skin

Signature of Student : 

Date : May 2016

ABSTRACT

The importance of understanding skin behaviour, either in biological domain or engineering field has led to many researches. Researches about the anisotropic and viscoelastic behaviour were carried out on human, animal or synthetic skin. The simple structure can look from outside, but complex anatomy when study in details under the skin layer. The complicated behaviour of skin such as highly non-linear, viscoelastic, inhomogeneous and anisotropic clearly shows the complexity behaviour of skin, especially when measuring and quantifying its bio-mechanical properties. Therefore, this research aims to quantify the Bio-Mechanical properties of animal's skin via multiple approaches and adapting various hyperelastic constitutive models. Systematic methodology employed in this research starts with the experimental approach (in-vitro mechanical testing) followed by the analytical approach (theoretical derivation) then numerical approach (computational parameter quantification) and finally Finite Element simulation (skin model simulation). Each approach was analysed three different animal's skin (bovine, ovine and leporine) as the main subject individually. All approaches and animal skins were adapted with three hyperelastic constitutive models (Mooney-Rivlin, Neo-Hookean and Ogden model) for comparison purposes. It is found that the Ogden model and numerical approach are the best studied model and approach in choosing the suitable analysis procedure of animal skin or skin like materials. The results and finding prove that the current study is significant and has contributed to knowledge enhancement about the deformation behaviour of the animal's skin.

ACKNOWLEDGEMENT

In the name of Allah, Most Gracious and Most Merciful.

Alhamdulillah, all praises to Allah for the strengths and His blessing in completing this thesis. Special appreciation goes to my supervisor, Prof. Madya Dr Jamaluddin Mahmud, and co-supervisor Dr Muhammad Hussain Ismail for the constant support, advice and encouragement throughout the course of my PhD degree.

To my wonderful family especially my wife, Nur Shakirah and children Nor Aidid Iman and Nur Airies Iman in understanding and encouragement for my study. Continues support from my mother and father Aminah and Adull Manan includes all family members.

Last but not least, all my friends and colleagues that provide knowledge and experiences to solve my studies obstacle. Thank you all.
