ABSTRACT

BACKGROUND: As number of Tuberculosis cases increase Health care workers (HCWs) tend to get more risk. It caused a greater concern among HCWs especially high risk group. HCWs are often dealing with potential infectious or positive Tuberculosis (TB) patients while undergo examination. Whenever there is potential exposure, action and prevention related this communicable disease towards high risk group must be considered and implement.

OBJECTIVES: Study was conducted to determine the level of knowledge, attitudes and practices among radiographers in Klang valley. Moreover, in this research also, was carried out to assess relationship between knowledge, attitudes and practices on Tuberculosis (TB) among radiographer in Klang Valley.

METHOD: This study was a cross-sectional study performed on Jan- March 2015. The respondents for this study only involved in six public hospitals. Total for respondents in this study were 184 of radiographers took part by using simple random sampling method. The tools for this study were based on structured questionnaires. Dichotomous questions used to measure the levels of knowledge. Meanwhile, Likert scale were use to determine the level of attitudes and practices. In addition, chi square test were used to see relationship between knowledge, attitudes and practices.

RESULTS: In this study, most of the respondents received adequate knowledge related TB with 47.3%. Furthermore, attitudes of respondents were in moderate level with 54.9% of respondents that willing to change their attitudes while handling with TB patient. However, it was surprisingly found that level of practices among respondents with majority were high with 70.1%. Besides that, there were relationship between knowledge, attitudes and practices with 0.003 and 0.004 respectively. It was found that, number of working experience and their attitudes shown positive significant with p-value of 0.041. Also, knowledge and their working hours per day were identified showing that p-value of 0.049.

CONCLUSION: Potential or positive PTB patients frequently coming for an examination to diagnose their health status in the hospitals. As HCWs especially radiographers frequently dealing with PTB patients they were in high risk or potential to be infected by this disease. Their KAP related TB is important for them to use and demonstrate as a barrier. Even though their knowledge and attitudes were in moderate levels, they tend to have good practices in TB infection control while handling with PTB patients. It was only some sort of stigmatization of their attitudes as well as their practices that driven an individual to follow the standard procedure related TB.

ABSTRACT	iii
ABSTRAK	iv
ABBREVIATIONS.....	v
LIST OF FIGURES AND TABLES.....	vi
CHAPTER 1	1
1.1 Background of the study.....	1-3
1.2 Problems statement.....	4
1.3 Significant of study	5
1.4 Research objectives	5
1.5 Research hypothesis	6
1.6 Research questions	6
1.7 Conceptual framework	7
1.8 Terms of references	8
1.9 Conclusion.....	8
CHAPTER 2.....	9
2.0 Introduction	9
2.1 Background of Tuberculosis.....	9-10
2.2 Stages for <i>Mycobacterium tuberculosis</i>	10-11
2.3 Routes and mode of transmission for Tuberculosis	11
2.4 High risk group and risk factors for Tuberculosis	11-12
2.5 Prevention and treatment in Tuberculosis.....	13-18
2.6 Levels of knowledge towards Tuberculosis	19
2.7 Attitudes of health care worker towards Tuberculosis	20-21
2.8 Practices of health care workers towards Tuberculosis	21-22
2.9 Relationship between knowledge, attitudes and practices	22
2.9 Conclusion	22
CHAPTER 3.....	23
3.0 Introduction	23

3.1 Study design	23
3.2 Study setting	23
3.3 Sampling design	23
3.3.1 Sampling method	23
3.3.2 Inclusion and Exclusion criteria	24
3.3.3 Sample size	24
3.4 Materials and methods	24-25
3.5 Data measurements.....	25
3.6 Pilot study.....	26
3.7 Main data collection	26-27
3.8 Data management and analysis	28
3.9 Ethical considerations.....	28
3.10 Expected outcomes.....	28
3.11 Conclusion.....	28
CHAPTER 4.....	29
4.0 Introduction	29
4.1.1 Socio- demographics of respondents	30-31
4.1.2 Levels of knowledge towards Tuberculosis	32-34
4.1.3 Levels of attitudes towards Tuberculosis	35-36
4.1.4 Levels of practices towards Tuberculosis	37-28
4.1.5 Relationship between knowledge, attitudes and practices towards Tuberculosis	39
4.1.6 Knowledge, attitudes and practices with working experiences	40-41
4.1.7 Knowledge, attitudes and practices with working hours per day	42-43
4.2 Conclusion	44
CHAPTER 5	45
5.0 Introduction	45
5.1 Levels of knowledge, attitudes and practices towards Tuberculosis	45-47
5.2 Relationship between knowledge, attitudes and practices towards Tuberculosis	47
5.3 The attributes between KAP with working experience and average working hours per day	47-48
5.4 Conclusion.....	48
5.5 Problems and limitations	49
