AUTHOR'S DECLARATION

I declare that the work in this dissertation was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This topic has not been submitted to any other academic institution or non-academic institution or any degree or qualification.

In the event that my dissertation be found to violate the conditions mentioned above, I voluntarily waive the right of conferment of my degree and agree be subjected to the disciplinary rules and regulations of Universiti Teknologi MARA.

Name of Candidate : Farah Nasuha Binti Md Zaki

Candidate I. D. No : 2011613496

Programme : Bachelor of Optometry (Hons)

Faculty : Health Sciences

Thesis Title : Review on analyzing material in ocular related cosmetics or contact lens products using liquid chromatography-mass spectrometry (LC-MS) and scanning electron microscopy (SEM)

Signature of Candidates :

Date : July 2015

ABSTRACT

Review On Analyzing Material In Ocular Related Cosmetics Or Contact Lens (CL) Products Using Liquid Chromatography-Mass Spectrometry (LC-MS) And Scanning Electron Microscopy (SEM)

INTRODUCTION: Circle contact lenses (CCL) are popular in the markets and there was a pigment that located on front or back surface or enclosed within the matrix of the lens. The purpose of this study was to analyze the material in ocular related cosmetics or contact lens products using LC-MS and SEM.

METHODS: The determination the material composed CL products and other ocular related materials was performed using LC-MS and the analyzing of pigment location was performed by SEM to discern the pigment location of the CCL was also analyzed based on the previous studied.

RESULTS: The report described the locations of pigment color additives of CCL and also analyzing the CL products and other ocular related from the previous studies.

CONCLUSION: The reviews showed the materials or content in ocular related cosmetics or CL product using SEM and LC-MS were important in determining how those products can have effect onto people's eyes.

KEYWORDS: liquid chromatography-mass spectrometry, scanning electron microscope, cosmetic contact lens, multipurpose solution, saline solution, lens care regimen.
