ABSTRACT

Hospitals or other health care institutions have produce the clinical waste. Clinical waste is also have the infectious and hazardous waste. Clinical waste is a one of the waste should have the proper disposal system. Therefore to protect the infectious and pollution of clinical waste, so the better method is incinerator.

In this dissertation the focus is a study into the privatisation and implementation of the clinical waste disposal system in Malaysia. To get the proper management so the government by Ministry of Health have do the privatisation of hospitals support services including clinical waste management system.

Therefore, the summarise in this dissertation will be covered on introduction and research outline for this dissertation. The background of clinical waste including history, characterisation of medical waste. It also cover on clinical waste in detail, the incineration system. The case study for this dissertation at Tongkah Medivest Sdn Bhd company. In this dissertation also cover on the analysis, conclusion and the recommendation.

Finally, this dissertation is want to identify the privatisation and the implementation the clinical waste disposal system. Through the incinerator is a better method to eliminate this clinical waste disposal. From the analysis, the testing result it is more better than Department of Environment guidelines. So, the uses of incinerator is convenient to clinical waste.

CONTENTS	PAGE
Abstract	i
Acknowledgement	ii
Table of Contents	iii - vi
List of Figures	vii
List of Tables	viii
List of Photographs	ix
CHAPTER 1 : INTRODUCTION AND RESEARCH OUTLINE	
1.0 Introduction	1 - 2
1.1 Aim of dissertation	2 - 3
1.2 Objectives of dissertation	3
1.3 Scope and limitation	4
1.4 Methodology	4 - 5
1.5 Organisation of dissertation	5 - 6
CHAPTER 2 : BACKGROUND OF CLINICAL WASTE	
2.0 Historical development of clinical waste	7 - 8
2.1 Introduction to medical waste	8 - 15
2.1.1 Medical waste characterisation	
2.1.1.1 clinical waste	
2.1.1.2 radioactive waste	
2.1.1.3 chemical waste	
2.1.1.4 pressurised containers	
2.1.1.5 general waste	
2.1.2 The sources of medical waste	
2.2 Risks of medical waste	16 - 19
2.2.1 Occupational risks	
2.2.2 Environmental risks	

2.2.3	Legal liabilities	
2.2.4	Political, economical and social risks	
2.3	Basic waste management concepts	20 - 22
2.4	Legal framework	23 - 24
2.5	Waste management framework and responsibilities	24 - 25
CHAPTER 3 : CLINICAL WASTE		
3.0	Definition of clinical waste	26
3.1	Categories of clinical waste	27 - 28
3.1.1	Group A waste	
3.1.2	Group B waste	
3.1.3	Group C waste	
3.1.4	Group D waste	
3.1.5	Group E waste	
3.2	Clinical waste generation	29 - 31
3.3	Status of clinical waste management practices	32 - 33
3.4	Documentation of clinical waste	33 - 35
3.5	Recommendation clinical waste handling procedures	35 - 46
3.5.1	Segregation and handling	
3.5.1.1	clinical waste bags	
3.5.1.2	sharps container	
3.5.1.3	internal transport	
3.5.2	Storage	
3.5.3	Compaction	
3.6	Transport of clinical waste	47 - 49
3.7	Guidelines for the safe disposal of clinical waste	49 - 52
3.7.1	Group A waste	
3.7.2	Group B waste	
3.7.3	Group C waste	
3.7.4	Group D waste	

3.7.5 Group E waste	
3.8 Privatisation of clinical waste management	53 - 57
CHAPTER 4 : INCINERATION SYSTEM	
4.0 Introduction	58 - 59
4.1 Clinical waste incinerator	59 - 62
4.2 Type of incinerator	62 - 67
4.2.1 Controlled air incinerator	
4.2.2 Rotary kiln combustion	
4.3 Storage at the incineration	68 - 69
4.3.1 Storage at the incineration (on-site incineration)	
4.3.2 Storage at the incineration (off-site incineration)	
4.4 Operation of incinerator	69 - 70
4.5 Disposal of residues and ash	70 - 71
4.6 Maintenance and troubleshooting	71 - 76
4.6.1 Routine maintenance	
4.6.2 Refractory repair	
4.6.3 Calibrations and routine testing	
4.6.4 Failures and response to failures	
4.6.5 Housekeeping	
4.6.6 Troubleshooting	
4.6.7 Common problems and their solutions	
4.6.8 Operating condition for longevity of equipment	
4.7 Standards for incinerator	77
