ABSTRACT

PHYTOCHEMICAL STUDIES, THIN LAYER CHROMATOGRAPHY AND GC-MS PROFILING OF *SALVADORA PERSICA* TWIG EXTRACT

Oral hygiene is one of the most important daily routine practices and keeps the mouth and teeth clean while prevents many health problems. Bad and improper care of oral hygiene can cause many mouth diseases. The suitability of miswak chewing sticks as a dental care tool is achieved mechanically by the ability of its fibres to reach in between teeth and chemically by the richness of its phyto constituents, which are unique in their complexity and biological activity. Previous studies have demonstrated the richness of *Salvadora persica* for the minerals and phytochemical components related to dental care. This study was carried out to investigate the phytochemical analysis and determine the compounds of twig of *Salvadora persica*. The method used is phytochemical screening, GC-MS analysis by using hydrodistillation and TLC analysis. The compound profile was found out to be alkaloids, flavonoids, tannins and saponins by using screening process of the ethanol extract, while the compounds present were terpenoids by using TLC process in ethyl acetate extract. For determining the compounds in twig of *Salvadora persica* using GC-MS, two solvents were used namely hexane and petroleum ether. For the result indicated that petroleum ether extracts show more compounds present than hexane extracts. In future study, the research can be done with take the sample of extract and test it with the mouth bacteria to determine how much they inhibit. Future study also can continue the research by using the FTIR instrument to determine what really the functional group of *Salvadora persica* shown.

TABLE OF CONTENTS

ACKNOWLEDGEMENTS	iii
TABLE OF CONTENTS	iv
LIST OF TABLES	v
LIST OF FIGURES	vi
LIST OF ABBREVIATIONS	vii
ABSTRACT	viii
ABSTRAK	ix
CHAPTER 1 INTRODUCTION	
1.1 Background of study	1
1.2 Problem statement	4
1.3 Significant of study	4
1.4 Justification of study	5
1.5 Objectives of study	5
CHAPTER 2 LITERATURE REVIEW	
2.1 Chemical constituents	6
2.1.1 Phytochemical screening	6
2.1.2 Previous study on chemical compounds in <i>Salvadora persica</i>	7
2.2 Biological activity of <i>Salvadora persica</i>	13
2.2.1 Previous study on anti-microbial effect of <i>Salvadora persica</i>	13
2.2.2 Previous study on anti-plaque effect of <i>Salvadora persica</i>	14
2.2.3 Previous study on anti-cariogenic effect of <i>Salvadora persica</i>	15
CHAPTER 3 METHODOLOGY	
3.1 Apparatus	16
3.2 Reagent and chemical	16
3.3 Instruments	17
3.4 Preparation of the miswak samples	17
3.4.1 Miswak sample	17
3.4.2 Preparation of the miswak for phytochemical analysis	17
3.4.3 Preparation of the miswak for GC-MS analysis	18
3.5 Phytochemical screening	19
3.5.1 Test for alkaloids content	19
3.5.2 Test for flavonoids content	19

3.5.3	Test for tannins content	19
3.5.4	Test for terpenoids content	20
3.5.5	Test for saponins content	20
3.6	Test for gas chromatography-mass spectrum (GC-MS)	20
3.7	Chromatographic analysis	21

CHAPTER 4 RESULTS AND DISCUSSIONS

4.1	Phytochemical screening of miswak extract	22
4.2	Thin Layer Chromatography (TLC) of miswak extract	24
4.3	GC-MS of miswak with hexane extract	25
4.4	GC-MS of miswak with PEP ether extract	26

CHAPTER 5 CONCLUSION AND RECOMMENDATIONS
