ABSTRACT

The growing demands for wireless communication services pose new challenges in the coming generation of cellular networks design. In Third Generation Partnership Project (3GPP) Long Term Evolution (LTE) networks, ever-higher data rate and energy efficiency (EE) are required to meet the increasing demands in cellular traffic. High data rates can be achieved, however, it requires high level of energy consumption which needs to be controlled especially in this era of green communication trends. The energy consumption of cellular networks worldwide has become a major obstacle to the continued future development of mobile data services, considering that the number of mobile phone users worldwide has already surpassed 4 billion and as the near exponential increase of data traffic carried over mobile networks continues, mobile network operators are faced with rapidly increasing energy costs and regulatory pressures to reduce their carbon footprint to operate more “green” networks. Hence, efficient solutions are necessary to optimize EE and at the same time achieve high data rates to meet green LTE requirements. This thesis proposed an efficient algorithm, namely, the Quality of Service (QoS) and Energy Efficient Aware (QEEA). The goal of QEEA is to achieve maximum throughput and improve the EE by using low transmitted power (43 dBm) which is the lowest power setting according to the 3GPP LTE specifications. This algorithm considers the head of line (HOL) delay, achievable throughput, past average throughput and transmitted power. Basically, the QEEA is based on the Time Domain (TD) and Frequency Domain (FD) scheduling where it is dependent on the QoS requirements to allocate resources. The proposed algorithm is compared against other scheduling algorithms, namely, the Channel and QoS Aware (CQA), Priority Set Scheduler (PSS), Proportional Fair (PF), Maximum Throughput (MT) and Blind Average Throughput (BAT). The simulation process was conducted using Network Simulator-3 (NS-3) and the performance of these packet scheduling algorithms were evaluated based on the performance metrics of throughput, delay, packet loss ratio (PLR), energy consumption rate (ECR), and EE for the voice over IP (VoIP), video and File Transfer Protocol (FTP) applications. The results showed that the QEEA algorithm outperformed the other algorithms as it could achieve up to 18% of maximum throughput, 27% reduction in ECR, and 36% improvement in EE in terms of radius ranging from 200 m to 1000 m. In terms of number of users in the cell, the algorithm could achieve up to 240% of maximum throughput, 61% reduction in ECR and 150% improvement in EE. Thus, it can be concluded that QEEA algorithm is the most energy efficient and the best candidate for provisioning the QoS for the real time (RT) and non-real time (NRT) applications.

ACKNOWLEDGEMENT

Firstly, I would like to thank God for giving me the opportunity and strength to embark on and complete this long and challenging PhD journey successfully. My gratitude and appreciation goes to my supervisor Dr. Darmawaty Mohd Ali, and co-supervisor, Assoc. Prof. Dr. Azlina Idris. Thank you for the support, patience and ideas in assisting me with this project. To Ministry of Higher Education, a big thank you for awarding me with the MyBrain15 Scholarship which has provided tremendous financial assistance throughout my three years of study.

Special thanks to my colleagues and friends for helping me throughout this journey.

Finally, this thesis is dedicated to my dear parents and also my beloved family members for the vision and determination to educate me. This piece of victory is dedicated to all of you. Alhamdulillah.

TABLE OF CONTENTS

CONFIRMATION BY PANEL OF EXAMINERS	ii
AUTHOR'S DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	x
LIST OF FIGURES	xi
LIST OF SYMBOLS	xiv
LIST OF ABBREVIATIONS	xvi
CHAPTER ONE: INTRODUCTION	1
1.1 Introduction	1
1.2 Flow Chart of the Research	3
1.3 Problem Statement	3
1.4 Objectives	5
1.5 Contributions of Study	5
1.6 Limitations of Study	6
1.7 Thesis Layout	6
CHAPTER TWO: LITERATURE REVIEW	8
2.1 Introduction	8
2.2 Long Term Evolution (LTE)	8

2.2.1	Scheduling Algorithm in LTE	11
2.2.1.1	Time Domain (TD) and Frequency Domain (FD)	14
2.2.1.2	Channel Unaware Scheduler Algorithm	16
2.2.1.3	Channel Aware/QoS Unaware Scheduling Algorithm	19
2.2.1.4	Channel Aware/QoS Aware Scheduling Algorithm	23
2.3	VoIP, Video and File Transfer Protocol (FTP)	35
2.4	Energy Efficiency in LTE	37
2.4.1	Energy Consumption Rate (ECR) and Energy Efficiency (EE)	40
2.4.2	Review on Energy Efficiency in LTE	40
2.5	Review on Energy Efficient Scheduling Algorithm in LTE	44
2.6	Summary	46
 CHAPTER THREE: RESEARCH METHODOLOGY		 47
3.1	Introduction	47
3.2	Flow Chart of QEEA Scheduling Algorithm	47
3.3	Time Domain (TD) Scheduler in QEEA	50
3.3.1	Time Domain (TD) Metric in Network Simulator-3 (NS-3)	51
3.4	Frequency Domain (FD) Scheduler in QEEA	52
3.4.1	Frequency Domain (FD) Metric in Network Simulator (NS-3)	53
3.5	Network Simulator-3 (NS-3)	58
3.6	Basic Flow Chart of NS-3	59
3.7	VoIP Traffic Model	60
3.8	Video Traffic Model	61
3.9	File Transfer Protocol (FTP) Traffic Model	63
3.10	Simulation Parameters	64
