## **ABSTRACT**

This paper discusses the potential to upgrade the 3A Accounting System for companies and organizations. By replacing outdated accounting systems with more powerful solutions, small and mid-sized businesses can reap many benefits which are higher efficiency, more productivity, and faster growth. A successful systems upgrade depends on several key factors: adequate planning, a realistic budget, the proper technology and a knowledgeable solutions provider.

This study also discusses about comparison between system that practiced by this company and also some recommendation to improve their accounting systems.
