**EVALUATION OF THE TENSILE PROPERTIES FOR
POLYPROPYLENE COMPOSITE – A FINITE
ELEMENT AND MECHANIC STUDIES**

HUSNANI BINTI HAMID

Final year project proposal submitted in fulfillment of the requirement of the
degree of **Degree of Bachelor of Sciences (Hons.) Polymer Technology**

Faculty of Applied Sciences

JULY 2019

AUTHOR'S DECLARATION

I declare that the work in this proposal was carried out originally with my own work otherwise indicated or acknowledged as a reference work.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi Mara regulating the conduct of my study and research.

Name of Student : Husnani Binti Hamid
Student I.D. No. : 2017413006
Program : Bachelor of Science (Hons) Polymer Technology
Faculty : Faculty of Applied Science
Thesis : Evaluation Of The Tensile Properties For PP Composite – A
Finite Element And Mechanic Studies

Signature of Student :

ABSTRACT

An investigation to study the accuracy of the Finite Element Analysis (FEA) using ABAQUS and RADIOSS by evaluating the tensile properties of the polypropylene composite was carried out. Despite many studies conducted on the properties of the PP composite, there is lack of understanding in the accuracy of the modelling technique. This study involved the use of ABAQUS and RADIOSS as the tools to evaluate the tensile properties for PP-EPDM composite at different strain rates (1, 10, 30, 100 and 200 mm/ms). The ABAQUS results show more accurate data with 0.89 %, 3.47 %, 6.29 % and 1.68 % of difference and the RADIOSS results were considered inaccurate with the 55.63 %, 83.75 %, 90.91 % and 88.24 % difference in results with respect to the results in literature. The accuracy of the tools had been identified and the recommendation were given to improve the accuracy problems.

TABLE OF CONTENTS

CONFIRMATION BY PANEL OF EXAMINERS	i
AUTHOR'S DECLARATION	iii
ABSTRACT	iii
ABSTRAK	iv
ACKNOWLEDGEMENTS	vi
TABLE OF CONTENTS	vi
LIST OF TABLES	x
LIST OF FIGURES	xi
LIST OF ABBREVIATIONS	xii
CHAPTER ONE: INTRODUCTION	
1.1 Research Background	2
1.1 Problem Statement	4
1.2 Objectives	4
1.3 Significance of Study	5
1.4 Limitation	5
CHAPTER TWO: LITERATURE REVIEW	
2.1 Introduction to Automotive Industry	7
2.1.1 Finite Element Modelling for Tensile Simulation	8
2.1.2 Introduction to the Polypropylene Plastic	9
2.1.3 Types of polypropylene composites in the automotive industry	10
2.2 Applications of PP Composite in Automotive	11
2.2.1 Bumper	12
2.2.2 Dashboard	12

3.4.4 Load Setting	34
3.5 Solver	34
3.5.1 HYPERMESH – RADIOSS	34
3.5.2 ABAQUS	36
3.6 Post-Processing	36
3.6.1 RADIOSS – Post Processing	37
3.6.2 ABAQUS – Post Processing	37
3.7 Numerical Equation	38
CHAPTER FOUR: RESULT AND DISUCSSION	
4.1 Deformation Behaviour Based On Simulation Results	39
4.2 Engineering Stress Based on Simulation Technique	43
4.3 Engineering Strain Based on Simulation	45
4.4 Displacement based on Simulation	46
4.5 Validation of the FEA Accuracy by Comparison with Mechanic Test	48
4.5.1 Correlation of Von Mises Stress with Real Test Results	49
4.5.2 Comparison of Strain Behaviour of the Material	51
CHAPTER FIVE: CONCLUSION AND RECOMMENDATIONS	
5.1 Conclusion	53
5.2 Recommendations	54
REFERENCES	55
AUTHOR’S PROFILE	62
