ACKNOWLEDGEMENT

Alhamdulillah to Allah S.W.T. and peace is upon his messenger Holy Prophet Muhammad S.A.W. praise to Allah S.W.T. for giving me courage, time and acknowledge in completing this study. I would like to take this opportunity to express my appreciation to all those who assisted in the completion of my thesis.

Special thanks to my helpful advisor, Miss Nurul Hafizah binti Azizan for their guidance and advice as well as suggestion given throughout the preparation and undertaking of this study.

I am greatly indebted to each and every employee who assists me in providing with valuable information and help me to complete this research during my practical training at Penang Port Commission (PPC) especially to my company supervisors Muhamad Fitrey bin Shamsul and also, to whom that has guidance me in every single day duty and provided outstanding support. Apart from that, thanks to Che Kechik binti Jaafar and Encik Mohd. Nizam bin Saidin, the Assistant Dangerous Goods Officer and thanks to all the staffs of PPC for their support, cooperation and advice.

My appreciation also goes to my beloved family, especially to my parents. Lastly, a special acknowledgement goes to UiTM, for giving the opportunity for me to pursue the study in Bachelor of Science (Hons) (Statistics). Also, I would like to thank any individual or people who might involve in the making of this thesis, directly or indirectly.

ABSTRACT

Status of declaration dangerous goods is important before the activities of loading, discharge or transshipment in the port to be carried out. The dangerous goods to be declared accordingly to the port authorities 48 hours in advance arrival. So, a study was conducted to determinants for status of declaration dangerous goods arrival at Penang Port. The secondary data was used in the study and the population of study is all the port users do the activities of dangerous goods in the port. From the population, only port users do the activities in the Penang Port is selected as sample. The total data selected was 286 respondents (port users) from population data. The method use to analyses the data is using chi square test to describe the relationship between container size, type of port users, weight of dangerous goods, total weight of dangerous goods, number of container and status of declaration dangerous goods. Based on chi square results only container size (20 footer) and weight of dangerous goods is significant with p-value less than 0.05. The significant variable is use multiple binary logistic regression using backward selection method to determine factors of status of declaration dangerous goods. The analysis shows that the factors of status of declaration dangerous goods are container size and weight of dangerous goods.

Keywords: Status of Declaration Dangerous Goods, Chi-Square Test, Logistic Regression
