Table of Contents

CHAPTER 1: INTRODUCTION	1
1.1 Introduction	1
1.2 Problem Statement	4
1.3 Research Question	7
1.4 Research Objective.....	7
1.5 Scope of Study.....	8
1.5.1 Level	8
1.5.2 Territory	9
1.5.3 Time	9
1.6 Significant of Study.....	9
1.6.1 Theoretical	9
1.6.1.1 Knowledge	9
1.6.2 Practical.....	10
1.6.2.1 Government.....	10
1.7 Definition of terms, terminology and concepts	10
1.7.1 Breast Cancer	10
1.7.2 Mammogram Screening Intention.....	11
1.7.3 Perceived Benefit.....	11
1.7.4 Risk Perception	12
1.7.5 Cultural Belief.....	12
1.8 Conclusion	12
CHAPTER 2: LITERATURE REVIEW	12
2.1 Introduction	13
2.2 Mammogram Screening Intention.....	13
2.3 Health Belief Model	15
2.4 Factors.....	20
2.4.1 Attitude	20
2.4.2 Knowledge	20
2.5 Independent Variables.....	21
2.5.1 Perceived Benefit.....	21
2.5.2 Risk Perception	22
2.5.3 Cultural Belief.....	23

2.6 Conceptual Framework.....	25
2.7 Hypothesis.....	27
CHAPTER 3: RESEARCH METHODOLOGY	31
3.1 Introduction	31
3.2 Research Design.....	31
3.3 Unit/Level of Analysis.....	31
3.4 Sample Size	32
3.5 Sampling Technique	32
3.6 Measurement/Instrumentation.....	33
3.6.1 Perceived Benefit.....	34
3.6.2 Risk Perception	35
3.6.3 Cultural Belief.....	36
3.6.4 Intention to Mammogram Screening among women	37
3.7 Data Collection.....	38
3.8 Data Analysis.....	38
3.8.1 Descriptive Analysis	39
3.8.2 Pearson Correlation	39
3.8.3 Multiple Regression	40
3.8.4 Pilot Study.....	41
3.8.5 Testing of the hypotheses.....	42
3.9 Conclusion.....	42
CHAPTER 4: FINDINGS	43
4.1 Introduction	43
4.2 Respond Rate	43
4.3 Demographic Section	44
4.4 Findings	46
4.4.1 Research Objective 1	46
4.4.2 Research Objective 2	47
4.4.3 Research Objective 3	48
4.4.4 Research Objective 4	49
4.4.5 Research Objective 5	50
4.5 Summary of Hypotheses Testing	51
4.6 Conclusion.....	51

CHAPTER 1

INTRODUCTION

1.1 Introduction

Breast cancer is the most frequent diagnosed cancer among women worldwide (Globocan, 2008; World Health Organization, 2013; Soskolne, Marie & Manor, 2006). According to Globocan (2012), the estimation of breast cancer incidence rate of population is 1.7 million people. According to American Cancer Society (2015), in 2015, it is estimated 231,840 new cases of breast cancer will be diagnosed among women and approximately 40,290 women will be died from breast cancer. Breast cancer disease is the most common cancer after lung cancer when ranked by cancer occurrence in both sexes, (Ferlay, Hery, Autier & Sankaranarayanan, 2010). According to National Cancer Institute (2017), globally the total number of new cases of breast cancer diagnosed annually exceeds one million, and this figure is expected to reach 1.6 million by 2015 in United States.

Breast cancer appears to be a major global health problem of both the developing and developed countries (Parkin et al., 2005; Al-dubai et al., 2011). The incidence of breast cancer varies between countries. In the develop country the highest incidence of breast cancer is in the United States and Northern South America, while the highest incidence rate of breast cancer in developing country of Asia is China (Pisani et al., 2002; GLOBOCAN, 2012). It is rising rapidly in Asian countries because of longer life expectancy and dramatic changes in parity and lifestyle. The increasing burden of breast cancer in Asian countries is exacerbated by late presentation and limited access to therapies, resulting in poorer outcomes. A number of reasons for poor uptake have been described in Singapore, Thailand, Malaysia and Iran, and these include cost of
