**Report submitted in partial fulfilment of the requirement
for the degree of
Bachelor of Science (Hons.) Management Mathematics
Faculty of Computer and Mathematical Sciences**

DECEMBER 2019

ACKNOWLEDGEMENT

This research was supported by University of Technology Mara, Negeri Sembilan Branch, and Seremban 3 Campus. Firstly, we are grateful to Allah S.W.T for giving us the strength to complete this project successfully. This final year project report which title Redesign Basketball Shoe sole by using Bezier Curve and Said-Ball Curve, was prepared for Faculty of Science and Mathematics, Universiti Teknologi Mara (UiTM), basically for student in final year to complete the undergraduate program that leads to the degree of Bachelor of Science (Hons.) Mathematics. This report is based on the methods given by the university.

We would like to express our deep gratitude to Mrs. Noorehan Awang as our research supervisor for their patient guidance, enthusiastic encouragement and useful critiques of this research work. We would also like to thank Dr Rossidah Wan Abdul Aziz for her advice and assistance in keeping our progress on schedule. Our grateful thanks are also extended to Dr Khairul Anwar Rasmani for his help during the planning and development of this research work. We also like to extend our grateful to the technician of the laboratory of the faculty department for their help in installing software for our research. Finally, we wish to thank our parents for their support and encouragement throughout our study.

ABSTRACT

Curve and surfaces design are a popular technique used in geometric design in Computer Aided Design (CAD)/Computer Aided Manufacturing (CAM). This study presents automatic outline capture of 2D object, which is particularly suitable for shoe sole since the shape of the shoe was originally a curve. The degree evaluation (DE) is used to find the optimal value for the control points of Bezier curve and Said-Ball curve. The outline of the curve for any object was usually applied in degree two and degree three of Bezier curve. Therefore, there is a need to elevate the curve of the shoe sole by using degree of Bezier and Said-Ball curves. Later the comparison between curves was done to find the best result and the best evaluation time. The process of producing outlines includes a few steps, discovering corner points and fitting the curve. Final result obtained in this study was fully automates the process and produces the best optimal results.
