**A COMPREHENSIVE ASSESSMENT
FRAMEWORK FOR MYKAD**

NIK AZMI NIK OMAR

Thesis submitted in fulfilment of the requirements
for the degree of
Doctor of Philosophy

Faculty of Computer and Mathematical Science

March 2012

ABSTRACT

We have witnessed a quantum leap in information communication technology (ICT). It is now pervasive with our everyday life and this has resulted in recent development of many new applications using ICT. Governments and Private Sectors have capitalized on this technological advancement in a variety of applications. Essentially technology is applied to increase efficiency and effectiveness. In some business entities, it can be used as a competitive advantage. The Malaysian government too has applied technology to gain the benefit and one of these is using multi-application smartcard which included personal identification. This is followed by other governments from various countries that launched a multipurpose identification smartcard. However, at the same time, being in the forefront has its own shortfall especially in the area of ensuring that smartcard is protected from any security breach. MyKad is a multipurpose smartcard which was introduced by the Malaysian government to identify its citizens. It is of paramount importance that the Malaysian government attain the public confidence to ensure that MyKad is 'tampered proof' so as the public can accept in using the applications and services affiliated with it. To achieve this, MyKad must be evaluated and pass through an acceptable level of security certification process and be assessed to the various types of possible security breach such as information tampering and the cloning of MyKad. This thesis therefore proposed a new MyKad Testing Strategy model for logical attacks. Furthermore, a comprehensive security assessment framework was proposed in the implementation of the certification of MyKad aligning with the framework of Common Criteria (CC). In view of this, the proposed framework follows the requirements of Vulnerabilities Assessment test (AVA) of ISO/IEC 15408-3 of CC. The objective of this assessment test is to evaluate the potential factors that potentially threaten the security of MyKad. The security assessment test of MyKad includes the aspects of security of information stored and evaluates the mechanism of handling the open data and providing application access to work with MyKad in the secured manner for enabling multiple applications. The security test assessment deployed on MyKad was using the test strategy from Alain Merle (2005) and adopting the common criteria (CC, 2009). Four vulnerabilities have been disclosed from the security assessment of MyKad done in this study. The vulnerabilities are firstly, Application Protocol Data Unit (APDU) can be collected from MyKad; next, open data can be read using the APDU commands; thirdly, the open data can be written to another sample of smartcard by cloning the data in MyKad; and lastly, the assessment has successfully uncover the communication vulnerability of MyKad with Card Acceptance Devices (CAD) towards being tapped. The significance of this research will benefit the government; public and private sector by proposing testing strategy model and security assessment framework for MyKad. As for the future extension of this study, researcher should emphasize on the development of a new generic Software Development Kit (SDK), standards for Card Acceptance Device (CAD) and identification of certification body for CAD and SDK.

ACKNOWLEDGEMENTS

Praise to Allah S.W.T the All Might for showering me with good experience throughout this study period and for all that has been bestowed on me. It is Allah's ascendancy that this study is completed. This research would not have been possible without support from many people. I wish to express my heartiest gratitude to both of my supervisors Prof Dr Saadiah Yahya and Dr Kamarul Ariffin Abdul Jalil, who was abundantly helpful and offered invaluable assistance, support and guidance for this thesis. Last but not least I wish to express my love and appreciation to my wife and my two sons for their understanding and endless love through the duration of my studies and to all my friends who have given me the motivation and moral support. ALHAMDULILLAH.

TABLE OF CONTENT

AUTHOR'S DECLARATION	ii
ABSTRACT	iii
ACKNOWLEDGEMENTS	iv
TABLE OF CONTENTS	v
LIST OF TABLES	xi
LIST OF FIGURES	xiii
LIST OF ABBREVIATIONS	xvii
CHAPTER 1 : INTRODUCTION	1
1.1 Introduction	1
1.2 Background of the Research	2
1.3 Problem Statements	4
1.4 Research Questions	8
1.5 Objective of the Research	8
1.6 Usefulness of the Research	12
1.7 Significance of the Research	13
1.8 Contribution of the Research	14
1.9 Limitation of the Research	15
1.10 Structure of the Research	18
1.11 Summary of the Research	19
CHAPTER 2: LITERATURE REVIEW	21
2.1 Introduction	21
2.2 Overview on Smartcards Technologies	22

2.3	Understanding Smartcards by its Definitions	23
2.3.1	Designs and Specification Features	26
2.3.2	Usage and Capabilities in Information Technology Security	27
2.3.3	Vulnerability of Smartcard	29
2.3.4	Security of Smartcard	31
2.3.5	Smartcard Threats	32
2.3.6	Method of Attack on Smartcard	33
2.4	MyKad as Malaysia identification Card in Smartcard Form	37
2.4.1	History of Malaysia Identification Card	38
2.4.2	MyKad Design and Specification	41
2.4.3	MyKad Detail File Structure and Operating System Management	43
2.4.4	Operating System of MyKad (MCOS)	45
2.5	MyKad Security Features	52
2.5.1	Physical Card Security	53
2.5.2	Chip security	65
2.5.3	Chip Operating System (OS) security	66
2.5.4	Application System security	66
2.5.5	MyKad: Compliance to International and Local Standards	67
2.6	Security Evaluation	71
2.7	Application of Common Criteria to MyKad	72
2.7.1	General Aspect of Vulnerability Analysis	76
2.7.2	Application of Attack Potential to Smartcard	77
2.7.3	The Model of Attack Potential of Smartcard	78
2.7.4	Information Gathering Attack	80
