Thank you to Allah for gives me the strengths and His blessing in completing this report. Special appreciation goes to my supervisor, SR Amir Fasha Mohd Isa for his supervision and constant support. His invaluable help of constructive comments and suggestions throughout the experimental and report works have contributed to the success of this research. My acknowledgement also goes to all the technicians and office staffs that directly and indirectly involve in helping me to do the research. Sincere thanks to Director Manager of Kenanga Satu Padu SDN BHD also Madam Uma Mageswary as my supervisor during practical in KSP SDN BHD for their guidance, advice and moral support during does this report in successfully. Thanks for her concern in ensure to being success at training time. Last but not least, my deepest gratitude goes to my beloved parents, Mr Abdul Rahim b Hashim and Fadillah bt Ahmad for their endless love, prayers and encouragement. To those who indirectly contributed in this report, your kindness means a lot to me. Thank you very much.

Thank you.

## **ABSTRACT**

This report briefly describes about contract implementation for public works. It also explain about tender process in detailed. Besides that, it also stated about types of tender. Public work is the work/contract where it given by Majlis Daerah/Pejabat Daerah/JKR to all contractors by tender. There is many types of tender been use in Malaysia for example open tender, selected tender, negotiated tender and so on. There are several types of tender practiced in Malaysia. Each tender type has advantages and disadvantages of each and its implementation is dependent on the compatibility of the tendering process. Selection of a tender in a construction project depends on several factors such as the size of the project, the construction site, as well as the cost of compliance with the allotted time, experience and so on . So, in my case study is about pavement work located in AmpangPecah. Pavement work is the work to maintained the road. When the pavement beyond its design life, it will be exposed to various types of failure and damage caused by the cumulative burden of traffic and others.
