Abstract

This present invention relates to Autism children that are lack of abilities to grip an object and have less sense of touch. It also helps them to increase their art productivity. As they cannot grip onto things easily, we came out with this invention to ease them to use and enjoy water color. In addition, we already make some extensive research on the design which to make sure that the color will not split anywhere and can maintain cleanliness of surrounding. Other than that, it can help the guardian or the staff to handle them as they know that it will not leave stain on the floors or the walls. Moreover, the best part is our product is washable which can be used frequently and using different colors. It obviously can ease them as it saves cost and flexible. Our product also helps them maintain their interest in coloring. Color grip actually helps and give opportunity to see their talents in themselves and can distract them from doing anything that can harm themselves, and others. We invented this product specifically referring to all autism children in National Autism Society of Malaysia (NASOM) in Malacca in order to promote Autism awareness among citizens also to show them that a person with a disability should not be discriminate because they have their own specialty.
