ABSTRACT

Inventory denotes the assets and important resources utilised in an organisation or industry in which it offers various benefits for firm cash flow and persistent viability. If the production inventory of a company faces shortage or other problems such as greater operating cost due to interest payments on loan cash, the management will be in a critical situation, thereby leading to loss of customers and profits. This encourages organisations to implement inventory control, which aims for the minimize the total cost of inventory, among others. Therefore, this study employed the Artificial Bee Colony (ABC) algorithm to ascertain the minimum total cost of inventory. The algorithm characterised a swarm-based meta-heuristic algorithm comprised of three divisions of bee troops in the ABC model, namely employed, onlooker, and scout bees. The resulting outcomes revealed a minimum total cost of inventory obtainable of RM45.38, with an optimal order quantity of 37 units.

ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	viii
LIST OF TABLES	ix
CHAPTER ONE: INTRODUCTION	
1.1 Background of the Study	1
1.2 Problem Statement	3
1.3 Objective of the Study	4
1.4 Scope of the Study	4
1.5 Significance of the Study	5
1.6 Summary	5
CHAPTER TWO: LITERATURE REVIEW	
2.1 Minimising Cost of Inventory Methods	6
2.2 Related Works of Artificial Bee Colony Algorithm	8
2.3 Summary	11
CHAPTER THREE: RESEARCH METHODOLOGY	
3.1 Data Collection method	12
3.2 Mathematical Model for Minimised Total Cost of Inventory	12
3.3 Artificial Bee Colony Algorithm	13
3.4 Summary	17

CHAPTER FOUR: RESULTS AND DISCUSSIONS

4.1	Data Collection	18
4.2	Artificial Bee Colony Algorithm	18
4.3	The Minimum Total Cost and Optimal Order Quantity	22
4.4	Summary	22

CHAPTER FIVE: CONCLUSIONS AND RECOMMENDATIONS

5.1	Conclusions	23
5.2	Recommendations	24
