## **ACKNOWLEDGEMENT**

Deepest acknowledgement and many thanks to all those who were involved in ensuring the successfulness of completing this research.

Among others:

Assoc. Prof. Dr. Hj. Azemi bin Che Hamid,  
(Deputy Director, Research and Industrial Linkages, UiTM Terengganu)

Assoc. Prof. Wan Dorishah binti Wan Abd Manan,  
(Deputy Director, Academic Affairs, UiTM Terengganu)

Assoc. Prof. Norudin bin Mansor,

Pn. Hjh. Rohana binti Yusoff,

Pn. Hjh. Wan Karomiah binti Wan Abdullah,

Pn. Aida Mustapha,

Pn. Sohinah binti Mohd Zain,  
(Marketing and Business Development Division,  
Companies Commission of Malaysia)

and

managers or owners of small medium enterprises in Kuala Terengganu and Kemaman for their cooperation and involvement in this study.

## ABSTRACT

This research focuses on Terengganu Small Medium Enterprises (SMEs) established in Terengganu developed districts which are Kuala Terengganu and Kemaman. The aims of this study are to identify the relationship between relative advantage, compatibility, complexity, trialability and observability with e-business adoption and to identify the e-business adoption level among SMEs in Kemaman and Kuala Terengganu. A questionnaire was the instrument used in getting the data with ninety samples from Kuala Terengganu and sixty-four samples from Kemaman. The Innovation Diffusion Theory (IDT) was adapted based on the five factors identified by Rogers (2003) which are relative advantage, compatibility, complexity, trialability and observability that affect the level of e-business adoption. For this exploratory study, all identified independent variables had relationships with e-business adoption but with less than moderate level of association. Five adoption levels were identified namely innovator, early adopter, early majority, late majority and laggard. Respondents in Kemaman dominated the innovator, early adopter and late majority categories whereas respondents in Kuala Terengganu dominated the early majority and laggard categories.
