UNIVERSITI TEKNOLOGI MARA**

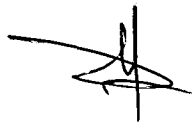

NOVEMBER 2010

This Final Year Project Report entitled “ **The optimization of the hydrolysis conditions (effect of temperature and pH) for the production of Cutlassfish or “Ikan Timah” (*Trichiurus Lepturus*) hydrolysate** ”was submitted by Noor Aqila Binti Derahman, in fulfillment of the requirements for the Degree of Bachelor Sciences (Hons.) Science and Food Technology, in the Faculty of Applied Sciences and was approved by

Dr. Normah Ismail
Supervisor
B.Sc. (Hons.) Food Sciences and Technology
Faculty of Applied Sciences
University Teknologi Mara
40450 Shah Alam
Selangor

Madam Fuziah Bt Mohamed Othman
Project Coordinator
B.Sc.(Hons.) Food Sciences and Technology
Faculty of Applied Sciences
University Teknologi Mara

ACKNOWLEDGEMENT

Bismilahirrahmanirahim....

Upon completion of this report project, I would like to express my special gratitude and appreciation to Allah S.W.T and Muhammad S.A.W that give me strength and patient in order to finishing my project. My heartfelt thanks to my project supervisor, Dr. Normah Ismail for giving her supervision, instruction, encouragement, critic, advise, support, comments and guidance throughout my project. Without her continuous support and interest this project cannot be presented as well already. I also would like to make a grateful wish to my beloved father and mother who always give me a blessing and fully support via spiritual and monetary in my project research. Thanks a lot to all staff of food science and technology laboratory of their help during my difficulties present.

Besides, my thanks gratitude goes to all my fellow friend's especially to my partner study project is Nadzirah Jamaludin, Nadiah Hazwani and entire courses mate that also give huge cooperate and support. Finally, my appreciation goes to those who have contributed direct or indirectly to this project.

Noor Aqila Binti Derahman

ABSTRACT

THE OPTIMIZATION OF THE HYDROLYSIS CONDITIONS (EFFECT OF TEMPERATURE AND pH) FOR THE PRODUCTION OF CUTTLASSFISH OR “IKAN TIMAH” (*TRICHIURUS LEPTURUS*) HYDROLYSATE .

This study was done to determine the optimization of hydrolysis conditions in relation to the effect of pH and temperature on the production of Cuttlassfish hydrolysate by using alcalase. The analysis was done by obtaining the optimum percentage of nitrogen recovery and percentage of degree of hydrolysis after the Cuttlassfish was hydrolysed for 120 minutes and exposed to constant enzyme substrate ratio (2%). The production process of cuttlassfish hydrolysate includes homogenization, maintaining time and enzyme substrate ratio, adjust pH and temperature based on Response Surface Methodology (RSM), terminating enzyme, cooled, centrifuge, then the supernatant was collected to determine the percentage nitrogen recovery and degree of hydrolysis. Total nitrogen in supernatant was obtained using the Kjeldhal method and α -amino nitrogen was determined by formol titration method. All the data that were obtained from the analysis was analysed by employing the RSM using Design Expert 4 software. Model equation was proposed with proposed based on the effect of pH and temperature on the nitrogen recovery (NR) and degree of hydrolysis (DH). The optimum level for the percentage nitrogen recovery (%NR) at pH 4 and temperature 80°C is 1.30836 and desirability is 0.676. While for percentage of degree of hydrolysis at optimum level for pH 7.24, temperature 53.7°C is 4.41772 and desirability is 0.890.
