ABSTRACT

This study investigates the empirical significant relationship between Domestic debt and economic growth in Malaysia. This research are using Ordinary Least Square (OLS) technique and using the time series data from 2010-2017. Besides, this study explores the significant relationship between domestic debt and economic growth in Malaysia. therefore, the data use after using the Unit Root Test to ensure the data is station by using Augment Dickey-Fuller. In addition, the other test is used in this research such as normality test, multicollinearity test, serial correlation and multiple regression. The finding for this study are significant and negative relationship for Gross Fixed Capital Formation (GFCF) and Domestic Credit in Private Sector (DCPS) towards Gross Domestic Product (GDP).However, for interest rates is insignificant and negative relationship between Gross Domestic Product (GDP).
