

**STRUCTURE ANALYSIS OF CABLE STAYED FOOTBRIDGE
(SIMULATION AND MODELLING)
DESIGN AND CALCULATION**

By

EDID AZHAR ATAN

Report is submitted as
The requirement for the degree of
Bachelor Engineering (Hons) (Civil)

**UNIVERSITI TEKNOLOGI MARA
2006**

DECLARATION BY CANDIDATE

I Edid Azhar Bin Atan, UiTM no 2001632889 confirm that the work is my own and that appropriate credit has been given where reference has been made to the work of others.

.....

(15 MEI 2006)

ACKNOWLEDGEMENT

In the name of ALLAH, the most gracious and is most merciful, with His permission, the proposal of the project has been successfully completed. Praised to Prophet Muhammad, His companion and those who are on the path as what he preached upon, may ALLAH almighty keep us blessing and tenders.

First and foremost, I would like to express my sincere gratitude to my supervisor Dipl.-Ing. Mohd Zaini Endut for his patience, guidance, support, and sincerity for assisting me during the preparation of this report.

My thanks are also forwarded to lecturer in Faculty of Civil Engineering for his kindness for giving some valuable information needed for this study.

Finally, I would like to express my special gratitude to my beloved family and my sweetheart for their encouragement and their moral support and also special thanks to whom have directly or indirectly given me support and help that did not mention their names here for their help and their understanding during the progress of studying in Universiti Teknologi MARA, Pulau Pinang.

Thank You.

ACKNOWLEDGEMENT	i
TABLE OF CONTENT	ii
LIST OF FIGURE	vi
ABSTRACT	vii

CHAPTER ONE : INTRODUCTION

1.1	Background	1
1.2	Problem Statement	2
1.3	Objectives of Study	2
1.4	Significant of Research	3
1.5	Scope of Research	3

CHAPTER TWO : LITERATURE REVIEW

2.1	History of Cable Stayed Bridge	5
2.2	Cable Stayed Bridge	
	2.2.1 Advantages of Cable Stayed Bridges	6
	2.2.2 Disadvantage of cable stayed bridges	7
2.3	Footbridges	7
2.4	Cable Stay System	9
2.5	Pylon	11
2.6	Bridge Deck	13
2.7	Cable Types	
	2.7.1 Spiral Strands	16
	2.7.2 Ropes	17
	2.7.3 Locked Coil Strands	17
	2.7.4 Parallel-Wire strands	18

ABSTRACT

The construction of bridges is an idea that is as old as mankind itself; it is something as simple as laying a log across a stream. Man has developed many different types of bridges throughout history, but the most remarkable among them is the cable stayed bridge. Cable stayed bridges date back to the early 1600's but were not produced on any significant scale until 1938. They are defined as those consisting of a continuous deck to which cables are connected diagonally from one or more towers supporting it directly.

Their construction has since matured into a highly technical discipline, allowing for reliable means of transportation across seemingly impossible stretches of land or water. The development of the cable stayed bridge has allowed engineers to span distances longer than ever before been attempted, mainly because of its ability to withstand the forces of nature as well as support massive amounts of weight. Because of its cost effectiveness and relatively short time of construction, the bridge proves to be very economical.
