2	AIMAN RASYDAN BIN HASENI	2017227762
3	MUHAMMAD HANAFI BIN NOR AZHAR	2017220508
4	MUHAMMAD ZULHILMI BIN ABD HALIM	2017221046

ACKNOWLEDGEMENT

Assalamualaikum w.b.t and greeting, we would like to express our deepest gratitude that we had finally completed our project. Our mechanical engineering design subject is a challenging subject that taught us to be creative and good in cooperating with teamwork. We were as happy as our subject was done with a truly collaborative effort of all the group members, supervisors, assistant engineers and acquaintances.

Firstly, we owe a very important debt to our superb supervisor, Dr. Zurriati Binti Mohd Ali for helping out a lot throughout the project and kept us in check so that we can complete the project in the time given. We would also like to thank you to our lecturer of Mechanical Design 2, Dr. Abdul Aziz for giving us a knowledge and tips required in other to complete the project and report.

We would also like to express our gratitude to each parent in the group member for being supportive and understanding in other for us to complete this project. We had received a lot of generous support from them to buy the materials needed in this project.

Last but no least, we would like to show our appreciation to each member of group for giving the best effort especially our team leader, Muhammad Wafiq Bin Mohd Fouzi that had done a great responsible in other to keep the project in progress. All members worked tirelessly throughout every process and every member are an asset of making this project a successful one.

ABSTRACT

Nowadays, housework such as mopping is one of the hardest task compare to the housework like brushing, dishing and etc. Due to that, hygiene of the place will affected if all the housework is not being completed. Because of that, we finally came out with an idea to solve this type of problem. The product that we made is a 'Portable I-Mop Cleaner'. This product is to help people to mop small area in their house such as dirty table, windows, and floor as well. Basically, our product is a mop that we innovate with automatic mop including blower.

Portable I-Mop Cleaner can help every people in this world to do the housework with ease. The size of the product also moderate which we can consider it size of hand tool. The automatic mop feature is the major function that we highlighted in this product because compare to the old type mop, we need to use a decent amount of energy to clean the dirty areausing the mop. We strongly believe the automatic mop feature will help people to reduce the energy used when do the housework.

Besides, the blower feature we added can help the process to dry the wet area. Usually after we mop the table we need to wipe it using cloth to dry the table but with this blower feature we don't need to wipe as much the table since the blower will dry the table simultaneously when mopping.

Moreover, as we know when mopping we will spray water or spread water to the dirt area to restrain the dirt from the area. Instead of we manually put the water to the dirty area, we add the 'mini water pump' sprayer into our product so people don't need to waste their time and energy to spray or spread the water to dirty area.

In short, our innovation in to the old mop is very useful for everyone to do the housework like mopping, it is valuable to buy our model as our price also reasonable and affordable. Besides, our product also comprises with good quality component and light weight.
