PLANTATION MANAGEMENT EXHIBITION AND SEMINAR 2018 (PIMES)

Melaka, Malaysia December 15, 2018

DEAN PREFACE

Assalamualaikum Warahmatulllahi Wabarakatuh

My heartiest congratulations go to the Committees for successfully organized PIMES September 2018. PiMES September 2018 enables lecturers and panels from strong industrial background to reflect and share significant ideas, experiences and research findings in the workplace and in partnerships. It is also hoped to encourage collaboration among the lecturers and enhance the quality and performance of the faculty. The research findings derived from this substantial event shall indicate the commitment of lecturers not only in teaching, but also in striving to unfold new knowledge and processes that will benefit the nation. The efforts of our lecturers need to be further extended to a wider audience so that the nation will benefit from the research findings. It is also hoped that, the proceedings will trigger serious thought and more robust research in the field of education as well as plantation and technology so as to help Malaysia achieve Vision 2020.

As we know, agriculture production has increased tremendously today because of the demand from various sectors in the world. To meet the challenges of increasing food demand, techniques and ways should be created to improve productivity, profitability and sustainability of the agricultural system. Industrial agricultural system has led to irretrievably changes in the landscape diversity, soil quality, environment integrity, and natural resource base. This has resulted major questions and curiosity worldwide in relation to the sustainability of agricultural production system. The most significant damage to natural ecosystems and the environment was caused by habitat conversion and corresponding climate change, loss of biodiversity and ecosystem functions, soil erosion and degradation, and pollution from fertilizers and pesticides. Concepts in plant protection have changed in past decades from exclusion or destruction of pest to pest management. Serious problems with pesticides, rapid development of new approaches and techniques in pest management based on improved knowledge of pest dynamics and their natural enemies, and the interaction between the pest and the crop.

It remains only for me to thank all those who have helped to make this events such a great and wonderful success. Much appreciation is due to the board editor, and reviewers of all papers submitted as well as to all authors whose ideas and contributions ensured rich and lively discussion during the various sessions.

DEAN. Assoc Prof Dr Asmah Awal

PLANTATION MANAGEMENT EXHIBITION AND SEMINAR 2018 (PIMES) Melaka, Malaysia December 15, 2018

INTRODUCTION

The PiMES committee and UiTM (Melaka), Jasin Campus residents are very pleased to welcome all participants in the Plantation and Management Seminar (PIMES) which is organized by Faculty and Agrotechnology.

PiMES aims to give an exposure to the students about the procedure to make a poster by extracting information from their final year project. This seminar will sharpen their communication skill as well as they can exchange and share their research result, projects, experiences and new ideas related to all aspects of studies in plantation management and agribussiness, plant sciences, soil sciences, plant protection, plant biotechnology and agricultural engineering. We sincerely hope that you will enjoy and return home with plenty of inspiration to improve agro-industry plantation practices and research activities.

PLANTATION MANAGEMENT EXHIBITION AND SEMINAR 2018 (PIMES) Melaka, Malaysia December 15, 2018

ANALYSIS OF CAROTENOID CONTENT OF DIFFERENT OIL PALM FRUITLETS BETWEEN RIPE AND UNRIPE FRUIT BUNCHES AND ITS MANAGEMENT

Anith Arina, Alawi Hj Sulaiman*

ABSTRACT

Elaies Guineensis is the most planted commodity crop in Malaysia. In the year 2017, oil palm sectors contributed to around RM 71.5 billion towards the Malaysian economy. However, the current processing method of producing crude palm oil will deteriorate carotene content. Carotenoids are natural chemical compounds that give palm oil its orange-red colour. These compounds are actually good for human health as it can strengthen body immunity system. So, the objective of this study was to determine the carotenoid content in ripe and unripe oil palm bunches. The analysis of oil samples was done using NIRS DA1650. Apart from carotenoid content, Deterioration of Bleachability Index (DOBI) and Free Fatty Acid (FFA) content can also be obtained. Stalks were removed from bunches. A total of 1 kg fruitlets were boiled, mesocarps were peeled off and pressed in order to obtain the oil samples. Oil samples were taken to Kempas Laboratory to analyze its content. It is proven that ripe bunches contain the average carotene content of ± 968.07 ppm compared to unripe bunches with only ± 927.37 ppm. Extraction of this element should be done enormously in order to fulfill the needs people in the countries that have serious health problems due to the insufficient amount of vitamin A in their bodies such as Africa and many more.

Keywords: crude palm oil, carotene, bunches, health, vitamin A
