

LED CLOCK

MUHAMMAD ZULHAIRI BIN KAMARULZAILAN

MUHAMMAD SYAFIQ BIN SIDI

A project report submitted to the Faculty of Electrical Engineering,
University Teknologi MARA in partial fulfillment of the requirements for the
award of Diploma of Electrical Engineering.

FACULTY OF ELECTRICAL ENGINEERING

UNIVERSITI TEKNOLOGI MARA

MALAYSIA

SEPTEMBER 2015

ACKNOWLEDGEMENT

“In the Name of Allah, Most Gracious and Most Merciful”

In preparing this final year project, we dealt with many people who have a major contributed significantly to understanding of these project.

Firstly, we would like to acknowledge and thank to our supervisor, Madam Hanunah Binti Othman for her encouragement and guidance throughout our project. Our appreciate also goes to our family who has support us over the years.

Furthermore, we also wish to extend my appreciate and thanks to our friends, especially our classmates who are willing to spend their precious time to give us ideas and suggestion in completing this project.

Last but not least, our great appreciate dedicated to those who engage directly or indirectly in completing this project. Indeed all views, support and assistance in completing this project are very beneficial.

ABSTRACT

This project is rarely used to develop analog clock because the development of the clock is complicated and to reduce the size of clock so it is portable and easy to use anywhere. The objectives of the project is to design LED digital clock and to display the time reading on the LED screen. This project also develop a microcontroller program by using the assembly programming language. This project requirement are component as Atmel microcontroller , capacitor , resistance, 74 series and 6 digit 7 segment LED. Then, experimenting the project which are construct and design of the project circuit using a suitable software to ensure the circuit gives out the desired output. Next is to construct the material as shown in the diagram, refer circuit diagram and decorate or design the LED clock circuit to be neat to be presented. The output of this project, the actual time in digital and stopwatch which can be set by the switch.
