NIGHT LIGHT AND SUNRISE ALARM

NOR SYAFIKAH BINTI PEZOL AHMAD SITI NURUL FATIHAH BINTI RAHAMAT RODERICK ANAK DAVID

A project report submitted to the Faculty of Electrical Engineering, Universiti Teknologi MARA in partial fulfillment of the requirements for the award of Diploma of Electrical Engineering.

FACULTY OF ELECTRICAL ENGINEERING UNIVERSITI TEKNOLOGI MARA MALAYSIA

SEPTEMBER 2015

ACKNOWLEDGEMENT

It is a genuine pleasure to express our deep sense of thanks and gratitude to our beloved supervisor; Dr Zakiah binti Yusoff. This dedication and keen interest above all her overwhelming attitude to help her students has been solely and mainly responsible for completing our projects.

We also give a great attitude to Sir Ezril bin Mat Saad; lecturer of Faculty of Electrical Engineering for our guidance and sharing his knowledge involving this projects without having limits to his times and space and also bless to help us from finishing this projects.

Appreciation gives to our partners as doing this project together even though there is some problems involving this projects. Also to our friends who willing to helps doing this project

ABSTRACT

Many people find the beep of an alarm clock to be a very unpleasant way to wake up .But in the modern life, the alarm clock have been produce in variety of product .Besides that, in modern society we often need to get up before sunrise. On the days when the alarm goes off, but it still dark outside; it can be difficult to get out of bed. This problem occur and make people got in trouble with time management will be interrupt and this causes people having stress in their lives. Thus, this project is use to wake people without interrupting their emotion too much that can cause stress during waking up. Plus, this project can act as table lamp to the room and easy their work in order to save their time according to their plan. The input of the project is the real time clock and power supply. The process of the night light and sunrise alarm project are the alarm clock has been set at certain time. Firstly, the power supplied was turned on.After that, we need to set the alarm using the button. The first button is for us to start of setting the time. The second button is for us to hold the hour and set the minute. The third button is for us to stop of setting the time in other word set the alarm according what we need. Lastly, the alarm activate when the time has come and the buzzer will sounded. The buzzer has their time interval of 1 minute and the sound will not stop until the 1 minute.
