ABSTRACT

This study focuses on the fuzziness in students' perception toward mathematics learning with the use of fuzzy set conjoint analysis model in analysing students' perceptions towards mathematics learning. This study found that students from both courses recorded the highest similarity of degree at level of agreement "neutral" with value of similarity 0.5827 for Management Mathematics and 0.5909 for Applied Chemistry. This implies that the major influenced attributes student's attitudes shows they are not confident with their answer whether to agree or not regarding to their preparation on studying notes before begin the class session thus showing a neutral perception toward mathematics learning. Besides, on the role of lecturers, students of both courses indicated a similar level of agreement with a rating of "strongly agree" but for different attributes. The most influenced attributes among Management Mathematics students strongly agreeing that their lecturers always give extra exercises while Applied Chemistry student strongly agreeing on effort from lecturers that always return back the entire test as students' reference and it conclude that lecturers perform well in their lessons. For students' perspective, the most influenced attributes shows neutral perceptions on their interest to learn mathematics for Management Mathematics student's while Applied Chemistry students' shows neutral perceptions toward difficulties to learn mathematics in short period. This report helps to rank the most influencing attributes of the students' perception toward mathematics and offers suggestions on approaches that can be applied to promote positive views of mathematics.

Keyword: Fuzzy Conjoint Analysis; Fuzzy set; Mathematics; Students' Perceptions

ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	viii
CHAPTER ONE: INTRODUCTION	
1.1 Background of the Study	1
1.2 Problem Statement	3
1.3 Objective of the Study	4
1.4 Scope of the Study	5
1,5 Significant of the Study	5
CHAPTER TWO: LITERATURE REVIEW	
2.1 A Conjoint Analysis Approach	7
2.2 Fuzzy Conjoint Analysis Theory	8
2.3 Mathematical Learning	8
2.4 Application on Fuzzy Conjoint Analysis Method	10
2.5 Summary	10
CHAPTER THREE: RESEARCH METHODOLOGY	
3.1 Survey on Student's Perceptions	12
3.2 Fuzzy Conjoint Analysis	13
3.3 Likert Scale	15
3.4 Degree of Similarity	15
3.5 Measurement Procedures	16
CHAPTER FOUR: RESULTS AND DISCUSSIONS	17
CHAPTER FIVE: CONCLUSIONS AND RECOMMENDATIONS	25
REFERENCES	27
APPENDICES	
APPENDIX A: QUESTIONNAIRE DESIGN	29
