Everyone will use a vehicle to go somewhere they want to be. They are susceptible to infection outside, for example when they enter a vehicle infected with the virus, which can infect others in the vehicle too. It can be spread through coughing, breath and touching. The design objective is to create a car product related to the new norm. Many problems and difficulties can be detected early in the research and at the same time creating new knowledge.

Muhammad Iman Zulhakim Saat Norarifah Ali

INCAS

These difficulties are in knowing what product can prevent covid-19 in vehicles. The coronavirus can live for hours to days on surfaces like countertops and doorknobs. How long it survives depends on the material the surface is made from. After research, we found a solution to prevent covid-19 infection in vehicles. The solution that was found is to create a car sanitizer. The function of car sanitizer is to sanitize inside the vehicle to prevent covid-19 in the vehicle. This product spray sanitizer to all parts inside the vehicle to remove viruses and this product has a usb port for other uses. It can also be used as an air humidifier by removing the storage inside and refilling the water. This product can be used on all types of vehicles as long as there is a socket. It has two nozzles to make the sanitizer more effective and take a short time to use this product. It will be a durable product and safe to use because this product doesn't have sharp edges. The portable sanitizer doesn't need any special space to place and portable sanitizers are difficult to take out anywhere because of their relatively large size. The target market of this this product is Malaysia. The target user user is own transportation and e-hailing because the vehicle has a car socket to using this product. The design criteria is minimalist, user-friendly, and safe. This product is inspired from minimalist style because minimalist is very suitable for car interior. This product is for use in cars to prevent covid 19 infection in cars after we are exposed outside. Its storage is 15 ml. It is ideal for people who go out to a crowded place or who are exposed to people who may be exposed to the covid-19 virus. It can also clean frequently used places such as the steering wheel, knob gear, button etc. This product has 4 colors of gray, black, maroon and dark blue. The colors were inspired from minimalist colors to The cover of the storage is red because it will make it more interesting and easy to know when we want to use. This product makes us safe because there is sanitizer in the car because we do not see the virus as e-hailing drivers.
