ABSTRACT

This study was conducted in order to obtain information on the Quality Systems practised in the local food industries. The data obtained from this study were then utilized to study the needs by the local food industries and potential students on the setting up of an Advanced Diploma (Degree) course in Food Quality Management at Institut Teknologi MARA. The surveys were conducted on the local food industries and related government agencies, and potential students.

The results obtained from the survey on the “Management of Food Quality in the Malaysian Food Industries” indicated that almost all the respondents applied Quality Systems in their daily operations. Among the Quality Systems, Good Manufacturing Practices or GMP and Hazards Analysis Critical Control Point or HACCP appeared to be the two major systems implemented, followed by ISO 9000s. For most of the respondents, these Quality Systems were being implemented at the processing line, raw material intake, packaging stage and product storage. Besides the production area, the respondents also practised Quality Systems in their management, marketing and distribution, and administration.

The survey on the “Feasibility Study on the setting up of an Advanced Diploma (Degree) course in Food Quality Management” indicated that almost all the respondents agreed with the setting up of such course. Most of the potential students

1.0 INTRODUCTION	1
2.0 LITERATURE REVIEW	3
2.1 QUALITY	3
2.2 QUALITY CONTROL AND ASSURANCE	4
2.3 QUALITY SYSTEMS/QUALITY MANAGEMENT SYSTEMS	7
2.3.1 Good Manufacturing Practices (GMP)	7
2.3.2 International Organization for Standardization (ISO 9000)	10
2.3.3 Hazards Analysis Critical Control Point (HACCP)	11
2.3.4 Total Quality Management (TQM)	13
2.4 QUALITY SYSTEMS AND THE FOOD INDUSTRIES	17
2.4.1 Implementation of Quality Systems in the Food Industries	18
2.4.2 Quality Systems Practised in Malaysia	21
3.0 MATERIALS AND METHOD	23
3.1 SURVEY ON THE “MANAGEMENT OF FOOD QUALITY IN THE MALAYSIAN FOOD INDUSTRIES”	23
3.1.1 Test on Independence	24

3.2	SURVEY ON THE “FEASIBILITY STUDY ON THE SETTING UP OF AN ADVANCED DIPLOMA COURSE IN FOOD QUALITY MANAGEMENT AT INSTITUT TEKNOLOGI MARA” BY ORGNIZATIONS	25
3.3	SURVEY ON THE “FEASIBILITY STUDY ON THE SETTING UP OF AN ADVANCED DIPLOMA COURSE IN FOOD QUALITY MANAGEMENT AT INSTITUT TEKNOLOGI MARA” BY STUDENTS	26
3.3.1	Respondent Selection	26
3.3.2	Questionnaire	27
3.3.3	Method of Analysis	29
4.0	RESULTS AND DISCUSSION	30
4.1	SURVEY ON THE “MANAGEMENT OF FOOD QUALITY IN THE MALAYSIAN FOOD INDUSTRIES”	30
4.1.1	Background of Respondents	30
4.1.2	Quality and Quality Practices/Systems	34
4.1.3	Relationship Between Variables	47
4.2	SURVEY ON THE “FEASIBILITY STUDY ON THE SETTING UP OF AN ADVANCED DIPLOMA COURSE IN FOOD QUALITY MANAGEMENT AT INSTITUT TEKNOLOGI MARA” BY ORGANIZATIONS	51
4.2.1	Background of Respondents	51
4.2.2	Views of Respondents on the Setting up of the Course	54
4.2.3	Proposed Curriculum and Potential Students	58
4.2.4	Relationship between Type of Organization and Form of Contribution	62

1.0 INTRODUCTION

Quality is all features and characteristics which bear on a product's ability to satisfy needs. This definition of quality differs from the old concept of quality which meant goodness or excellence. Quality is best achieved when it is managed throughout the design, purchasing, receiving, processing operations, transporting, storing, retailing and use by consumers. High quality is then achieved when all these functions work properly together as quality is everyone's job (Kuhn, 1991).

As far as the food industries are concerned, the quest for quality has been recognized for many years. Prior to the 1960s, control of quality was mainly focused on finished product inspection. Between the 1960s and 1990s, some emphasis was given to raw material control in addition to finished product examination. The trends in the 1990s show a greater tendency to control food production at both the raw material and processing stages, giving less control at the finished product stage.

In order to achieve the objective of quality, food industries implement some of the available quality systems or practices such as: Good Manufacturing Practices (GMP), International Organization for Standardization (ISO) 9000, Total Quality Management (TQM), and Hazards Analysis Critical Control Point (HACCP).
