UNIVERSITI TEKNOLOGI MARA FACULTY OF ARCHITECTURE, PLANNING AND SURVEYING DEPARTMENT OF INTERIOR ARCHITECTURE

OCTOBER 2012

It is recommended that this project report prepared

by

MOHD ASYRANI B ROSANI

titled

PROPOSED UPGRADING TO EXISTING INTERIOR DESIGN OF PLANETARIUM NEGARA AT NO. 53, JALAN PERDANA, 50480 KUALA LUMPUR FOR NATIONAL SPACE AGENCY (ANGKASA)

accepted in partially fulfilment of the requirements for a Diploma in Interior Design

Report Supervisor	:	Dr. Ahmad Marzukhi bin Monir
Course Coordinator	:	Abdul Hamid Mohamed

ABSTRACT

The aim of this research is to identify the problems and find solutions for the proposed upgrade to the existing National Planetarium as the management at the National Planetarium are planning to upgrade their exhibitions and facilities. Another objective of this research is to organize the information obtained from the research done and extract information that will help in solving problems identified. This report also will serve as documentation to ensure the design process will stay on the right path. Both qualitative and quantitative methodologies are used in the process of this research. The qualitative research data is obtained from interviews with the workers of the National Planetarium and the visitors. This method is also used during the case study at Petrosains, Kuala Lumpur, and National Science Centre, Kuala Lumpur. The quantitative research data was gathered with the aid of questionnaires. The result of preliminary observation revealed that there is a need to upgrade the exhibition due to the high level of visitors that are not satisfied on the exhibitis inside the National Planetarium. The designer recommends that the National Planetarium undergoes a full upgrade especially in terms of their exhibitions to coincide with the future plan of the National Planetarium. This project is done to help the management of the National Planetarium get an overview of what will the upgrade would look like. Based on the observation done the current issue that is are mainly lacking a good flow for the visitor to look at the exhibit and go around the gallery, and in addition of little improvement over the years. Due to this the designer recommends a complete overhaul of the exhibitions and to create a more interactive exhibits and better attraction. A better flow is introduced to enhance the visitors experience and to give more comfort. It is intended that this complex will be the centre for all other Planetarium in Malaysia to refer to, and to be the centre of space and technology learning.

ACKNOWLEDGEMENT

Bismillahirrahmanirrahim and Assalamualaikum w.b.t..

Alhamdulillah and praise to Allah the Almighty for His blessing and guidance that enabled me to complete this report for my final year project. First and foremost I would like to express my gratitude to all that helped and supported me during my research and design process especially to Ms Rozani Ezrina, the Internal Program Manager of National Planetarium who was willing to spend her time to answer questions from me no matter how busy she was.

My greatest gratitude to all of my lecturers here at University Technology of MARA especially to Mr Mohamed Nizam and his wife, Mrs Suziyanty, to Mr Afzanizam, Mrs Nurrajwani and Mr Abdul Hamid who gave helpful advices that has made my research smooth, Dr. Ahmad Marzukhi, Mr Harris, Ms Noorfaiza and Mrs Norashikin who guided me in making my research a success. Not also forgetting the RadiusGSA family who has given me many advices and tips during my practical training.

Most importantly, I would like to thank my parents and my siblings for their support and prayers. Last but not least, I would like to express my thanks to my colleagues and studio mate that helped me.

Thank you and may Allah bless you all.

CHAPTER 1.0 INTRODUCTION

1.1 INTRODUCTION

The National Planetarium is the national planetarium of Malaysia which was officially opened on 1993 (ANGKASA). The blue domed structure is located on top of a hill in the Lake Gardens at Jalan Perdana, Kuala Lumpur. The site encompasses an area of 120,000 square feet (11,000m²) (Planetarium Negara, 2011). During its time, it was a revolutionary and was quite a challenge for the project architects and engineers to build and design the structure due to its special theatre design. It took over two years for the facility to be fully equiped with equipments and exhibits. The National Planetarium is constructed (refer to Plate 1.1) during the time of which the country lacks professionals in the numerous area of work and it was an amazing feat that it was completed with minimum delay (ANGKASA). Figure 1.1 shows a simple timeline of the history of the National Planetarium. It was launched during the year 1993, as shown in Plate 1.2.
