ACKNOWLEDGEMENT

Alhamdulillah, praise and thank to Allah because of His Almighty and His utmost blessings, I was able to finish this research within the time duration given. Firstly, my special thanks go to my supervisor, Puan Shapina binti Hj Abdullah, for her advice, criticism, guidance and brilliant and fantastic ideas from the beginning of this project to the end of this project without any complaint and patience.

Special appreciation also goes to my beloved parents, family, thanks for being on my side at all times during the development of this project by giving their support, encouragement, patience and financial support to me.

Last but not least, I would like to give my gratitude to my dearest friend for sharing information, views and tips and also for showing their support to help me in completing this project. Thank you to all who have helped me a lot and inspired me in order to ensure that this project can be finished. There are a lot of challenges in doing this project. But I hope this project will give a lot of benefits to the readers and others as well.

Thank you.

ABSTRACT

Burger King a global chain of hamburger fast food restaurants. There are currently, three franchise holders in Malaysia. Nowadays the computer technology becomes very important in daily life. One of the problems in technology is data storage and management. Before F & B Portal be implemented, users itself have to face many steps to make an order in Burger King. Besides, admin staffs are facing problem with the manual system to record the data. The main objective is to clearly tracking system and messaging notification for F & B Portal. Thus, users are able to check the location of the ordered item in online ordering sub portal. With this F & B Portal system, users can simply make order and view it through website to keep track the status of their order. Therefore, F & B Portal system is proposed. The strength of F & B system is that it centralized Online Food Ordering system in one web system which is include tracking and messaging system to make user more easier to track their order. This system is useful for admin and staffs for them to update any incoming orders in which stage of production.
