

DEVELOPMENT OF A SURVEY
GENERATOR TOOL FOR CREATING
QUESTIONNAIRES TEMPLATES AND
COLLECTING DATA

FINAL YEAR PROJECT THESIS

A 3rd Year Student

Project Thesis submitted in part fulfillment of the degree
Bachelor of Computer Science (Hons) with the supervision by Dr
Nasiroh Omar and coordinated by.
Assoc. Prof. Zaidah Ibrahim

Computer Science Department
Faculty of Computer and Mathematical Sciences
Universiti Teknologi MARA

24 May 2010

ACKNOWLEDGEMENT

Alhamdulillah, with blessing from Allah, finally I have finished my project thesis. Praise and thanks to Allah as without His permission, I would not finished this project successfully till the end.

First of all, I would like to take this opportunity to express my deepest appreciation to Dr Nasiroh Binti Omar for being both my supervisor and coordinator whom always give, advices, motivation, support and guidance in completing this project as well as comments during the process of completion of this final year project.

Many thanks to my family who never quit in giving me full support, understanding and courage throughout the research without hassle. Thanks also to my friends for always supporting me.

Finally, a deepest gratitude goes to my course colleagues of CS230 for their help and others who have, in one way or others, given me. And to the respondents for the cooperation they gave. Last but not least, to the seniors who have shared their knowledge in preparing this project. Thank you.

ABSTRACT

The purpose of the study is to develop a survey generator tool. A survey generator tool is a tool for designing and creating survey from scratch that offers convenience to the surveyor as the tool are able to generate desired survey for the surveyor. Nowadays survey generator tool have limitation in services that they offered as in order to have advanced services, surveyor have to pay for them. Surveyor can only do the basic things to create survey, as they cannot customize their survey as they want. The first objective of this paper is to identify the features of a survey generator tool. Second objective is to develop the survey generator tool for creating questionnaires templates. Lastly, to test the functionality of the tool. The conclusion of this paper is, survey generator tool ease surveyor in terms of creating their survey and offers flexibility ranging from changing and rearranging the questions, in order to customize a new survey questions for the user. The challenges in completing this paper is developing the survey generator tool are not as simple as people can see or think as it is not easy to code dynamic graphical user interface in netbeans such as build dynamic JButtons that can invoked `actionPerformed` when a button is clicked. And also to arrange the questions and answers as the survey really owner wants.

Keyword: Survey Generator Tool, Dynamic GUI, Java Netbeans.
