ABSTRACT

The aim of this paper is to develop a business model that can correlate for designing an elderly care services (E-Care) portal. Then, with specific findings from this research, a proposed has made up to Senior Citizen Club of Section 24, Shah Alam as a case study to investigate the types of care services for elderly community as the content to put inside E-Care portal. Meanwhile, the request for elderly care services has risen in demands among the senior citizen. So, this research will go further to offer knowledge related to elderly care so the knowledge will easily be discovered by all caregivers. Furthermore, through E-Care portal also senior citizen can keep their connection with each other across the social network. Then, the method approach used for this research will consist of two phases which are in the first phase was to develop business model by using business model canvas tool (Canvanizer) and the second phase was to design an elderly care services (E-care) Portal by adapting SDLC methodology. Then, a mix mode method used to analyze the data findings based on statistical analysis on types of care services. Then, the previous data being compared with the data gathered through discussion with the club's president and the results show that there are 3 types of care services that are the most vital desired by the elderly community. Besides, overall from the literature review show that business model canvas is the most suitable tool for developing business model to design E-Care portal. Hence, this research can go further by studies about the structural assurance concept on elderly care services and research on the issues on design web portal that is accessible by the most elderly community.

ACKNOWLEDGEMENT

Alhamdulillah, all the praise and gratefulness to Allah for giving me strength to finish this IT Project. Without His blessing, this project could not have been completed. I appreciate to everyone who involved in my research by giving advice, help, and support.

Firstly, I wish to express my gratitude to my supervisor, Assoc. Prof. Mardziah bt Hj Hashim for her support, guidance, and information to help me along to complete this project. I also would like to convey my appreciation to my Research Methodology for Information Technology's Lecturer, Prof. Dr. Wan for his guidance and information. All the guidance and information are valuable to me. Besides I am particularly, grateful to the manager, Mej. Tunku Burhanudin and club's members of Kompleks Warga Emas, Bandaraya Shah Alam for his assistance in collecting the data during this research process.

Lastly, thanks to my family for their constant support and prayers during my study. Besides that, I would like to thank to my friends who helps me to complete this research. I really appreciate it and it is really valuable to me. Thank you very much for the support and guidance.

May Allah bless all of them.
