## **ABSTRACT**

One of the most common disabilities among Autism Spectrum Disorder (ASD) children is social interaction impairment, which particularly in recognizing facial emotion expression. As nowadays mobile application is increasingly used to support ASD children, it is important to steer the interface design of the mobile application to meet the needs of the children. Therefore, this project aims to identify the requirements of mobile application interface design for ASD children, to design the user interface and to evaluate the design for the children to learn facial emotion expression. The target users were the ASD children and teachers at Sayang's Care for Special Needs & Day Care Centre at Seksyen 7, Shah Alam. Interview with the teachers and observation on the children interaction with mobile application were conducted to gather the requirements needed. Through the analysis of the requirements, the design of the interface prototype was done after implemented the mobile application assessment and created paper-based storyboards as an early design approach. Then, the prototype underwent evaluation by the teachers and ASD children through interview and observation. The evaluation results have led to the improvement of the prototype to produce the final design of the mobile application user interface. This project will provide the appropriate user interface design for ASD children in learning facial emotion expression. In addition, it will create awareness of suitable user interface design for children with social interaction impairment.

## ACKNOWLEDGEMENT

*Praise be to Allah SWT Most Gracious, Most Merciful*

First and foremost, all my greatest praise to Allah SWT, the Almighty for his blessing and permission upon us to complete the project within the time duration given. There were many challenges I have been through upon completing the project, but the blessing from Him had given me strength and patience to successfully accomplish the project.

A special thank and sincere appreciation to my wonderful supervisor, Puan Jamaliah Taslim from Faculty of Computer and Mathematical Sciences, UiTM Shah Alam for the guidance and support throughout the project. She has given me plenty of advices and ideas during the progress of the project to be accomplished.

Special appreciation also goes to my beloved husband Muhammad Ruzaini Bin Ibrahim, my parents and my family members for their understanding and encouragement throughout my Master study.

Last but not least, I would like to express my gratitude to all who were involved and have contributed to the completion of this project, especially to Sayang's Care for Special Needs & Day Care Centre at Seksyen 7, Shah Alam for their participation in the project. I offer my regards and blessings to all of those who supported me in any aspect for the completion of this project.

Alhamdulillah and thank you very much.
