## ABSTRACT

A study of an educational website between IIC, KUIS and USM from the perspective of IIC students will look at the user satisfaction for each of the websites. The research objectives are to determine the relationship between the website elements and user satisfaction, to compare the level of user interaction satisfaction between the websites and to capture the emotions involved in the comparative study of the three websites. The feedbacks from IIC website users' shows the website have bad design, the color was dull, the layout was simple, unfriendly and their feelings involved were bored, unhappy and confused. The methodologies used in this study were QUIS tool, Shneiderman model of Eight Golden Rules and Desmet model of PrEemo tool. QUIS tool used to evaluate the user satisfaction, while Eight Golden Rules for user interface guideline and PrEemo tool for emotion evaluation experiment with the respondents. The user satisfaction has been evaluated by referring to website elements such as screen, website capabilities, multimedia and emotion. The findings showed that the website element that has strong relationship with user satisfaction was emotion. While the highest level of user satisfaction comes from USM website. The implication of the study was USM website can be a benchmark in proposing a new design for IIC website future work. As for the limitation, the challenge comes from the size of population which it only covers a sample of population from IIC. It is better to get a sample of population from USM and KUIS as well.

## ACKNOWLEDGEMENT

Praise is to Allah S.W.T and blessing be on His Prophet S.A.W for the ultimate guidance. I would never have been able to finish my IT Project without the guidance from people who have directly or indirectly contributed to this research.

I would like to express my deepest gratitude to my advisor, Puan Fauziah Redzuan for her guidance, care and persistent in guiding me for my research writing. I would also like to thank my fellow students for being my respondents for this research. My research would not have been possible without their participation and cooperation.

My heartiest appreciation will definitely goes to my families especially my dearly husband, Fairuz Mohd Rafdzi for the continuous support and of course my dearly children, Muhammad Zarif Hayyan, Muhammad Qayyim Harraz and Puteri Nuha Hasya. They always be my inspiration throughout this journey and their understanding are not comparable with other things in this world. May what I've done today will be an inspirations for them in the future.

My appreciation also goes to my parents, parents in law and siblings for being understanding and full with moral supports back and forth. My thankful thought also goes to Siti Azirah Azhari, Nurul Huda Jahari and Noor Fadhilah for being good teammates throughout the post graduate journey. They always willing to help and give their very best commitments for every course taken together.

Not forget are my colleagues for always there for any prompt advice, Siti Nur' Ain Hamsan, Suhaila Abdul Kadir and Rafidah Isa for being thoughtful and full with spirits to complete this journey.

Last but not least, thank you to Lars Rengersen from SusaGroup.com for granting me an academic license for using PrEmo tool online which without this tool this research might not be completed successfully. Same goes to University of Maryland for the academic license on the QUIS tool that really helps me in conducting an experiment with user interface satisfaction.
