ABSTRACT

Mobile messaging is an important and quickly growing business for the mobile network operators and is becoming increasingly important to third-party content providers as well. Providing content services on the mobile networks offers a good source of revenue as the user base and the means to bill for the services is already in place. The problem is that there is not one specific standard for interconnection between value added service applications and the mobile network. The mobile network standards only cover the connectivity within the network, leaving the external connections out of scope. The lack of management features provided by the interconnectivity solutions is also a problem.

The mobile terminals on the GSM network currently support a variety of different message formats and the range of different protocols used to connect service applications is even larger. This report describes the technology and business models for providing messaging services, concentrating on the interconnectivity problems from both the mobile network operator and the service providers' point of view. As a solution to the problems identified, both protocol standardization work and a category of messaging middleware such as Message Gateways and Routers, is introduced.

ACKNOWLEDGEMENT

Alhamdulillah, praise to Allah, the Most Gracious and Most Merciful. With His utmost blessings, I eventually had completed this written report within the time given.

A sincere appreciation to my dedicated supervisors, Dr. Kaharudin bin Dimyati and En. Farok bin Azmat for their concern, guidance and support through the progress of this study.

Dedicating a deepest gratitude to my family members especially my husband for the support and encouragement. Without their support, I would have no enthusiasm to go further.

Finally, a special thank you to all my friends for the contribution, moral support and opinions.

TABLES OF CONTENTS

TITLE PAGE	i
ABSTRACT	ii
CANDIDATE'S DECLARATION	iii
ACKNOWLEDGEMENT	iv
TABLES OF CONTENTS	v
LIST OF TABLES	viii
LIST OF FIGURES	ix

CHAPTER 1: INTRODUCTION

1.1	Background of the Research	1
1.2	Problem Statement	5
1.3	Scope of the Research	5
1.4	Research Questions	5
1.5	Objective	5
1.6	Significance of Research	7
1.7	Research Approach	8
1.8	Conclusion	11

CHAPTER 2: LITERATURE REVIEW

2.1	GSM	12
	2.1.1 Number of Connections, GSM	14
	2.1.2 GSM Network Structure	14
	2.1.2.1 Base Station Subsystem (BSS)	
	2.1.2.2 Base Transceiver Station (BTS)	
	2.1.2.3 Network Switching Subsystem (NSS)	
	2.1.2.4 Mobile Switching Centre (MSC)	
	2.1.2.5 Home Location Register (HLR)	
2.2	Brief History of GSM and GSMA	22
2.3	Short Message Service	25
2.4	History of SMS	25
2.5	Technical Details	27
2.6	How Does SMS Work?	30
2.7	Premium Content	31
2.8	Applications of SMS	32
2.9	Popularity	33
2.10	Limitation of SMS	37
	2.10.1 Data Rate and Latency.	
2.11	Short Code	39
	2.11.1 Regional Differences	
2.12	Short Message Centre Services	41
	2.12.1 Operation	
	2.12.2 Protocols	
	2.12.3 Companies	

2.13	Short Message Peer to Peer Protocol	43
	2.13.1 Example	
2.14	Universal Computer Protocol (UCP)	45
	2.14.1 Syntax	
	2.14.2 Technical Limitations	
2.15	Malaysia's Telecommunication Environment	47
	2.15.1 Introduction	
	2.15.2 Telecom Sector Restructuring	
2.16	Malaysian Communications and Multimedia Commission (MCMC)	52
	2.16.1 Roles and Responsibilities	
	2.16.2 Power and Functions	
	2.16.3 Framework for Development	
	2.16.4 Numbering and Electronic Addressing	
2.17	Malaysia Mobile Market	57
2.18	Conclusion	58

CHAPTER 3: RESEARCH METHODOLOGY

3.1	Introduction	59
3.2	Research Method	60
3.3	The Respondents for Research	61
	3.3.1 Background of Respondents (Interview Session)	
3.4	Sources of research	62
3.5	Research Instrument	63
	3.5.1 Interview session	
	3.5.2 Observation session	
3.6	Conclusion	66

CHAPTER 4: RESULTS AND ANALYSIS OF DATA

4.1	Introduction	67
4.2	Company Background	67
4.3	Celcom SMSC Architecture	69
4.4	Celcom's Next Generation SMSC	70
4.5	Corporate Features / Large Accounts	72
	4.5.1 UCP Interworking	
	4.5.2 SMPP Interworking	
4.6	Message Centre Connectivity	76
4.7	Short Message Peer to Peer (SMPP) Protocol	77
	4.7.1 Introduction	77
	4.7.2 SMPP Protocol Definition	78
	4.7.3 SMPP Session Description	80
	4.7.3.1 Outbind	
	4.7.4 SMPP Network Layer Connection	83
	4.7.5 SMPP Messages Sent from ESME to SMSC	84
	4.7.5.1 SMPP Message Response from SMSC to ESME	
	4.7.5.2 Typical SMPP Session Sequence - ESME
