

UNIVERSITI TEKNOLOGI MARA

**A NETWORK AWARE BASED
RECOMMENDER SYSTEM FOR VOIP
APPLICATION SERVICE IN
ELEARNING ENVIRONMENT**

NAZDIANA BINTI AB.WAHAB

Dissertation submitted in partial fulfillment of the
requirements for the degree of
Master of Science in Computer Networking

Faculty of Computer Science and Mathematics

November 2009

ACKNOWLEDGEMENT

First and foremost, all praise is to Allah, the Most Merciful, for His Love and Guidance. Salutations on the Prophet Muhammad (Peace be upon him), his family, and fellow companions.

In particular, I would like to thank my supervisor Puan Rosanita for her support, kindness and patience in the making of this thesis. I am also is greatly indebted to Mr Faisal for his continuing contributions as well as countless positive and helpful suggestions. His time and effort spent will not be forgotten and may Allah bless him always. To Mr Farouk, thank you so much for not giving up and the opportunities given until I finally get to this stage.

I thank my mom for everything she has done for me. Her support has helped me in many ways and indeed my life will be difficult without her. I also would like to acknowledge all my sisters and brother for the endless support. I am so grateful to God for blessing me with such a wonderful family.

For my husband, thank you so much for the love, encouragement and support. For his endless patience all this while, and he will always be important to me. For my beloved daughter, she is the greatest gift in my life ever and mummy loves you so much.

Last but not least, thank you to all my friends especially Wan Khadijah and Hisham for all helps and contributions.

It was not been easy for me as a mother, wife, employee and student. But with his will and strength given, *Alhamdulillah* today I am here writing the last page of the thesis. Thank you very much again to everyone mentioned above. Their enthusiastic support has contributed to the success of my thesis.

CHAPTER I

INTRODUCTION

1.0 Background.....	1
1.1 Problem Statement.....	3
1.2 Motivation and Objectives.....	5
1.3 Scope of Thesis.....	6
1.4 Thesis Contribution.....	7
1.5 Thesis Organization.....	8

CHAPTER II

LITERATURE REVIEW

2.1 VOICE OVER IP.....	9
2.1.1 General Architecture.....	10
2.1.2 VOIP Network Protocol.....	11
2.1.3 Voice Compression and Encoding.....	13
2.1.4 VOIP Application Software.....	13
2.1.5 Challenges and Issues for IP-based Voice and Video.....	14
• End to End Latency.....	15
• Packet Loss.....	16
• Jitter or Variable Delay.....	17
2.1.6 Characteristic of Voice and Data in VOIP.....	18
2.1.7 Bandwidth Measurement.....	19
2.1.8 Bandwidth Measurement and Monitoring Tools.....	20
• Pathload.....	20
• MRTG.....	21
• Netpeeker.....	22
2.2 eLEARNING.....	23
2.2.1 Education Evolution and Trend.....	24
2.2.2 Mobile Device as elearning Access Media.....	24
2.2.3 WIFI and Cellular Network Technology as Medium for Internet Access.....	25
• WIFI.....	25
• GPRS.....	25

• 3G.....	26
2.2.4 Advantages of eLearning.....	26
2.3 SKYPE.....	27
2.4 INTEGRATION OF VOIP IN ELEARNING.....	28

CHAPTER III

METHODOLOGY

3.1 RESEARCH METHOD OVERVIEW.....	29
3.2 INITIATION PHASE.....	32
3.2.1 Scope and Area of Project.....	32
3.2.2 Gathering Information and Identify Problem Statement.....	32
3.3 PLANNING PHASE.....	32
3.3.1 eLearning Prototype System with VOIP Application Integration.....	32
3.3.2 Recommender System Algorithm for VOIP Services.....	34
3.3.3 Bandwidth estimation Process.....	35
3.4 EXPERIMENTAL PHASE.....	37
3.4.1 Integration and Implementation of Pathload and MRTG.....	37
3.4.2 Network Aware based Recommender System testing.....	43
a. Algorithm data range POC.....	43
b. Algorithm Testing and Commissioning in eLearning prototype system....	46
3.5 ANALYSIS PHASE.....	47
3.6 HARDWARE SPECIFICATION.....	48

CHAPTER IV

RESULT ANALYSIS AND DISCUSSION

4.1 Bandwidth Estimation using Pathload and MRTG.....	49
4.1.1 Experiment 1: GPRS Scenario.....	51
4.1.2 Experiment 2: 3G Scenario.....	53
4.1.3 Experiment 3: ADSL Scenario.....	54
4.2 Network Aware based Recommender Testing.....	55
4.2.1 Algorithm Data Range Proof of Concept.....	56
4.2.2 Algorithm Testing and Commissioning in eLearning prototype system.....	58

CHAPTER V

CONCLUSION.....	61
5.1 Recommendation.....	62

ABSTRACT

The varying bandwidth availability of a network path, has contributed to the unstable performance when running audio and video services over the internet network. VOIP application integration in eLearning system, which offers voice and video services, is one example of applications that has been affected by this varying network availability. To minimize this impact, a network based algorithm that could provide current network status on bandwidth availability, and then do the recommendation accordingly is needed. Therefore, this dissertation work, proposed a network based recommender that could be used in the application of VOIP services in eLearning environment. This paper showed the integration of VOIP in a simple eLearning prototype system. A network aware based algorithm is used to recommend users the best VOIP services available at that point of time (whether audio, video or data) based on the real time data obtained from bandwidth measurement tool. Pathload has been chosen as a measurement tool that estimates the available bandwidth of a network path.
