

ACKNOWLEDGEMENT

In the name of Allah, the most Gracious and the most Merciful
May His blessing be upon the prophet Muhammad s.a.w

First and foremost, I would like to express my deepest appreciation and gratitude to Allah s.w.t for His blessing. He also has bestowed me with strength, ability and opportunity to successful and smoothly accomplishes this project.

My next deepest gratitude goes to my supervisor, **Pn Jamaliah Taslim** for her encouragement, patience and support in guiding me to complete this research paper successfully. It is for sure that I will not be able to carry out this project and complete it in time without her knowledge, support, and guidance. Not to forget, my thesis project coordinator, **Pn Wan Amalina Wan Hariri** and **PM Rashidah Rawi** for all the information, guidance, support and opinions.

Finally, I wish to express my love and special thanks to my beloved parents, **Mr Abdul Malik Salleh** and **Puan Rahmah Hanafi** for giving me much of the aspiration, and to my family, **Fakhrul Anuar**, **Noor Amilin**, **Nur Mardhati** and **Nur Hidayah** for all the support and cooperation from the beginning until the completion of this research. Not to be forgotten, my special appreciation also goes to **Hazwani Mohd Othman**, **Nurul Ahmad Nizam**, **Badariah Mohd Isa**, all my lecturers and friends for all their encouragement and support. Last but not least, thank you to all the people that has helped me throughout the accomplishment of this research.

May Allah bless all of you. Amin.

UiTM Shah Alam, November 2009

ABSTRACT

Adoption and usage of Electronic Commerce (E-Commerce) websites is found to be particularly effected by trust concerns by the consumers. The lack of trust mostly due to security and privacy concerns, unfamiliar online services, lack of direct interaction with product and sellers, as well as poor credibility of online information. This research is aim to know what the consumer trust perception is when they engage with the B2C E-Commerce transaction. The study is seen important, as it identified user's interface requirements for trust elements toward the B2C E-Commerce website. These identification processes has led to the creation of a proposed user's interface design based on Model of Trust in E-Commerce (MoTEC) that provides a framework making explicit factor likely to affect the customer trust. There are four dimensions in the MoTEC model which is pre-interactional filters, interface properties, informational content and also relationship management. This research focuses only on the pre-interactional filters and interface properties in MoTEC. This study has specified its scope to the people in Shah Alam, Selangor, also at Sintok, Kedah and related organization, besides focusing on B2C E-Commerce website from the aspect of trust. The interface design is the main outcome of this research, excluding the content of the rest of the B2C E-Commerce website. Besides benefiting the customers that would like to engage in the B2C E-Commerce, it indirectly benefits the B2C E-Commerce web developer, by exposing them toward the interface design that will promote customer trust. In sum, many parties can gain many benefit through the B2C E-Commerce website. Interface requirements and trust elements were obtained though research questionnaire, while the design of the B2C E-Commerce website was created by using Joomla 1.5.2 Extension with Virtuemart 1.1.3. The result obtained was analyzed and led to the design working prototype to show how the interface in B2C E-Commerce website can affect the consumer perceptions toward the trust development in B2C E-Commerce.
