## ABSTRACT

Older people nowadays have evolved and changed in this new era of high technology. Ageing has a tendency to be connected with reductions in health status and resources, which can possibly influence the adoption of new technology. Nonetheless, the part of IT is turning out to be always compelling in our everyday living though the digital services such as email, e-banking and e-shopping. Consequently, older people definitely go over different IT-related items, particularly computers and the Internet, in their daily lives. This study intends to identify the main reasons why older people use or do not use IT and how they learned about IT. This qualitative study was conducted among three key informants (KIs) and five older people aged 65 to 67 using in-depth interview method. The findings show that the major reasons for the older people to utilize IT were social trends, maintenance of family members and friends' connection, self-enhancement, leisure activities and perceived usefulness. The findings reveal that the declines in health, problems with the designs, problems with the language and problems with the resources were the obstacles faced by the older people to use IT. The findings from this study could provide opportunities for KPerak Inc. Corporation through K-Society Unit to create approaches and suggestions in order to encourage more and more, older people to use IT in their everyday life especially in Ipoh, Perak.

## ACKNOWLEDGEMENT

In the name of Allah, the Most Gracious and the Most Merciful. All praise belongs to Allah and may peace upon Prophet Muhammad S.A.W., the messenger of Allah. I wish to express my sincere appreciation to my Supervisor, Dr. Fariza Hanis Abdul Razak for supervising and guiding me throughout this long and challenging journey.

My appreciation goes to Mr. Ahmad Norizwan Bin Azmi from K-Society Unit, KPerak Inc. Corporation and his staffs who provided the facilities and assistance during data collection. Special thanks to my colleagues and friends for supporting me throughout the project.

And of course to my beloved wife, Nur Azlun Bt Mustafa, thank you for your understanding and morale support throughout this challenging journey. Last but not least, my deepest appreciation to my parents and family members who always there to support. Alhamdulillah.
