ABSTRACT

A substantial body of literature identifies a strong linkage between the economic development and CO_2 emission. Thus, the objective of this study are to find the relationship between economic development and CO_2 emission and to investigate the impact of economic development to CO_2 emission in Malaysia for the period of 1986 to 2016. The independent variables used include economic growth, population, urbanization and industrialization. Dynamic Ordinary Least Square (DOLS) method was used to analyse the data collected from World Bank Data and Our World in Data in order to understand the impact of economic development on CO_2 emission in Malaysia. The result revealed that two out of the four independent variables shows a positively significant relationship with CO_2 emission which are economic growth and urbanization. Meanwhile population and industrialization shows a negatively significant relationship with CO_2 emission. The research findings will assists the Malaysia's policy makers with some information to help them to make better policies.

TABLE OF CONTENTS

	Page
ACKNOWLEDGEMENT	iv
LIST OF TABLES	vii
LIST OF FIGURES	ix
LIST OF ABBREVIATION	x
ABSTARCT	xi
CHAPTER 1: INTRODUCTION	
1.0 Introduction	1
1.1 Background of Study	
1.1.1 Carbon dioxide (CO_2) Emission	1-2
1.1.2 History of CO_2 emission and GDP in Malaysia	3-5
1.1.3 Sources of CO_2 emission in Malaysia	5-6
1.2 Environmental Kutznets Curve (EKC)	6-7
1.3 Problem Statement	7-8
1.4 Research Objective	
1.4.1 General Objective	8
1.4.2 Specific Objective	8-9
1.5 Significance of Study	9-10

3.4.5 F-Test 23-24

CHAPTER 4: DATA ANALYSIS AND FINDINGS

4.1 Introduction 25

4.2 Correlation Test 25-26

4.3 Unit Root Test 26-27

4.4 Cointegration Test 27

4.5 Long-run Estimation 27-29

4.6 F-Test 30

CHAPTER 5: CONCLUSION AND RECOMMENDATION

5.1 Introduction 31

5.2 Discussion 31-32

5.3 Conclusion 33

5.4 Recommendation 33
